Ontological Reduction:

Quine's Criterion of Ontological Reduction Dai Young Yun,1997 **John Searle** Barry Smith,Barry C. Smith,2003-08-18

From his groundbreaking book *Speech Acts* to his most recent studies of consciousness freedom and rationality John Searle has been a dominant and highly influential figure amongst contemporary philosophers This systematic introduction to the full range of Searle s work begins with the theory of speech acts and proceeds with expositions of Searle s writings on intentionality consciousness and perception as well as a careful presentation of the so called Chinese Room argument This is the only comprehensive introduction to Searle s work Reductive Explanation in the Biological Sciences Marie I. Kaiser,2015-12-16 This book develops a philosophical account that reveals the major characteristics that make an explanation in the life sciences reductive and distinguish them from non reductive explanations Understanding what reductive explanations are enables one to assess the conditions under which reductive explanations are adequate and thus enhances debates about explanatory reductionism The account of reductive explanation presented in this book has three major characteristics First it emerges from a critical reconstruction of the explanatory practice of the life sciences itself Second the account is monistic since it specifies one set of criteria that apply to explanations in the life sciences in general Finally the account is ontic in that it traces the reductivity of an explanation back to certain relations that exist between objects in the world such as part whole relations and level relations rather than to the logical relations between sentences Beginning with a disclosure of the meta philosophical assumptions that underlie the author s analysis of reductive explanation the book leads into the debate about reductionism in the philosophy of biology and continues with a discussion on the two perspectives on explanatory reduction that have been proposed in the philosophy of biology so far The author scrutinizes how the issue of reduction becomes entangled with explanation and analyzes two concepts the concept of a biological part and the concept of a level of organization The results of these five chapters constitute the ground on which the author bases her final chapter developing her ontic account of reductive explanation A Metaphysics for Scientific Realism Anjan Chakravartty,2007-10-18 Scientific realism is the view that our best scientific theories give approximately true descriptions of both observable and unobservable aspects of a mind independent world Debates between realists and their critics are at the very heart of the philosophy of science Anjan Chakravartty traces the contemporary evolution of realism by examining the most promising strategies adopted by its proponents in response to the forceful challenges of antirealist sceptics resulting in a positive proposal for scientific realism today He examines the core principles of the realist position and sheds light on topics including the varieties of metaphysical commitment required and the nature of the conflict between realism and its empiricist rivals By illuminating the connections between realist interpretations of scientific knowledge and the metaphysical foundations supporting them his book offers a compelling vision of how realism can provide an internally consistent and coherent account of scientific knowledge *The Nature of Consciousness* Ned Block,Owen Flanagan,Guven

Guzeldere,1997-09-10 Intended for anyone attempting to find their way through the large and confusingly interwoven philosophical literature on consciousness this reader brings together most of the principal texts in philosophy and a small set of related key works in neuropsychology on consciousness through 1997 and includes some forthcoming articles Its extensive coverage strikes a balance between seminal works of the past few decades and the leading edge of philosophical research on consciousness As no other anthology currently does The Nature of Consciousness provides a substantial introduction to the field and imposes structure on a vast and complicated literature with sections covering stream of consciousness theoretical issues consciousness and representation the function of consciousness subjectivity and the explanatory gap the knowledge argument qualia and monitoring conceptions of consciousness Of the 49 contributions 18 are either new or have been adapted from a previous publication

The Reduction of Physical Theories Erhard Scheibe,2025-07-09 By describing examples of four fundamental physical theories this work of Erhard Scheibe presents an important and powerful approach to reduction in physics Novel to the approach is that it is based not on a single eternally valid concept of reduction but on a series of recursively constructed reductions with which all reductions appear as combinations of very specific elementary reductions In addition to the kinds of reduction introduced in the first volume the limiting case reduction is included as a new reduction type here which becomes effective in combination with those introduced earlier This second volume demonstrates the far reaching consequences of the concept for selected examples in physics Special and General Relativity Theory and Quantum Mechanics A separate chapter is dedicated to the subtle concept of micro reduction and to kinetic theory The book is systematically organized and intended for readers interested in philosophy of science as well as physicists without deep philosophical knowledge

Holism and Reductionism in Biology and Ecology Rick C. Looijen,2012-12-06 Holism and reductionism are traditionally seen as incompatible views or approaches to nature Here Looijen argues that they should rather be seen as mutually dependent and hence co operating research programmes He sheds some interesting new light on the emergence thesis its relation to the reduction thesis and on the role and status of functional explanations in biology He discusses several examples of reduction in both biology and ecology showing the mutual dependence of holistic and reductionist research programmes Ecologists are offered separate chapters clarifying some major yet highly and controversial ecological concepts such as community habitat and niche The book is the first in depth study of the philosophy of ecology Readership Specialists in the philosophy of science especially the philosophy of biology biologists and ecologists interested in the philosophy of their discipline Also of interest to other scientists concerned with the holism reductionism issue

The Concept of Reduction Raphael van Riel,2014-02-19 This volume investigates the notion of reduction Building on the idea that philosophers employ the term reduction to reconcile diversity and directionality with unity without relying on elimination the book offers a powerful explication of an ontological notion of reduction the extension of which is primarily formed by properties kinds individuals or processes It argues that related notions of reduction such as theory reduction and

functional reduction should be defined in terms of this explication Thereby the book offers a coherent framework which sheds light on the history of the various reduction debates in the philosophy of science and in the philosophy of mind and on related topics such as reduction and unification the notion of a scientific level and physicalism The book takes its point of departure in the examination of a puzzle about reduction To illustrate the book takes as an example the reduction of water If water reduces to H₂O then water is identical to H₂O thus we get unity Unity does not come at the price of elimination claiming that water reduces to H₂O we do not thereby claim that there is no water But what about diversity and directionality Intuitively there should be a difference between water and H₂O such that we get diversity This is required for there to be directionality in a sense if water reduces to H₂O then H₂O is prior to or more basic than water At least if water reduces to H₂O then H₂O does not reduce to water But how can this be if water is identical to H₂O The book shows that the application of current models of reduction does not solve this puzzle and proposes a new coherent definition according to which unity is tied to identity diversity is descriptive in nature and directionality is the directionality of explanation

Personal Reality, Volume 1 Daniel Paksi, 2019-05-02 Western civilization was built on the concept of God Today modern science based on the critical method and so called objective facts denies even the existence of our soul There is only matter atoms molecules and DNA sequences There is no freedom there are no well grounded beliefs The decline of Western civilization is not the simple consequence of decadence hedonism and malevolence Modern critical science has liberated us from the old dogmas but failed to establish our freedoms values and beliefs However human knowledge is not objective but personal We are the children of evolution Everybody sees the world from his own personal point of view anchored into his her body We use our billions of years old evolutionary skills and thousands of years old cultural heritage to recognize and acknowledge the personal facts of our reality freedom and most important natural beliefs respect and speak the truth In reality even science itself is based on our personal knowledge Only our false conceptual dichotomies paralyze our thinking God or matter there is a third choice the emergence of life and human persons This is the only way to defend our freedoms and the Christian moral dynamism of free Western societies

Reductionism and Systems Theory in the Life Sciences Paul

Hoyningen-Huene, Franz M. Wuketits, 2012-12-06 The present volume aims at giving a discussion of the problems of reductionism in contemporary life sciences. It contains six papers which deal with reductionism in different fields of biological research. Also the holistic perspective and the systems view is discussed in some of the papers. The message of this discussion is that whereas reductionism is indeed an important strategy, the systems approach is needed. It is argued by some of the authors that organisms are complex systems and not just heaps of molecules. So that the analytical method does not suffice. Recent developments in systems theory offer the possibility to install a more comprehensive view of living systems, what can be seen particularly in the field of evolutionary biology. It is true that any organismic activity is molecular; this is to say that it is based on molecular mechanisms. But it is also true that the whole organism displays certain patterns of behavior which are not just molecular. Any organism can be described as a system of different levels of organization, different levels of order and complexity, and it is important therefore to study all of the organizational levels and to see their peculiarities. It should be obvious, however, that there is not one problem of reductionism but that there are many problems linked together and that these problems appear at different levels of biological research and bio philosophical reflections. **Data**

Integration in the Life Sciences Erhard Rahm, 2004-03-18 This book constitutes the refereed proceedings of the First International Workshop on Data Integration in the Life Sciences DILS 2004 held in Leipzig, Germany, in March 2004. The 13 revised full papers and 2 revised short papers presented were carefully reviewed and selected from many submissions. The papers are organized in topical sections on scientific and clinical workflows, ontologies and taxonomies, indexing and clustering, integration tools and systems, and integration techniques. **Ontological Reduction** Reinhardt Grossmann,

Social Ontology and Modern Economics Stephen Pratten, 2014-09-25 Economists increasingly recognise that engagement with social ontology, the study of the basic subject matter and constitution of social reality, can facilitate more relevant analysis. This growing recognition amongst economists of the importance of social ontology is due very considerably to the work of members of the Cambridge Social Ontology Group. This volume brings together important papers by members of this group, some previously unpublished, in a collection that reveals the breadth and vitality of this Cambridge project. It provides a brilliant introduction to the central themes explored, perspectives sustained, insights achieved, and how the project is moving forward. An initial set of papers examine how ontology is understood and justified within this Cambridge project and consider how it compares with prominent historical and contemporary alternatives. The majority of the included papers involve social ontological analysis being put to work directly in underlabouring for specific types of development in economics. The papers are grouped according to their contribution to clarifying and developing: i) various competing traditions and projects of modern economics; ii) history of thought; contributions; iii) methodological concerns; iv) ethics; and v) conceptions of particular aspects of social reality including money, gender, technology, and institutions. Background to and a brief history of the Cambridge group is provided in the Introduction. **Social Ontology and Modern Economics** will be of interest not only to

economists but also philosophers of social science social theorists and those eager to explore the nature of gender social institutions and technology

Phenomenological Ontology of Breathing Petri Berndtson, 2023-02-28 This book studies the phenomenological ontology of breathing It investigates breathing and air as a question of phenomenological philosophy and looks at phenomenological questions concerning respiratory methodology ontological experience of respiration respiratory spirituality and respiratory embodiment Drawing on the ideas of Maurice Merleau Ponty Gaston Bachelard Martin Heidegger Edmund Husserl Luce Irigaray and David Kleinberg Levin the book argues for the ontological primacy of breathing and develops a new principle of philosophy that the author calls Silence of Breath Abyss Yawn of Air It asserts that breathing is not a thing or person oriented relation but perpetual communication with the immense elemental atmosphere of open and free air This new phenomenological method of breathing offers readers a chance to begin to wonder rethink re experience and reimagine all questions of life in an innovative and creative way as aerial and respiratory questions of life Part of the Routledge Critical Perspectives on Breath and Breathing series the book breaks new ground in phenomenology and phenomenological ontology by offering a decisive and insightful treatment of breath It will be indispensable for students and researchers of philosophy phenomenology and ontology It will also be of special interest to Merleau Ponty scholars as it investigates uncharted dimensions of Merleau Ponty's philosophy

NeuroLaw and Responsibility for Action Bebhinn Donnelly-Lazarov, 2018-05-03 Law regulates human behaviour a phenomenon about which neuroscience has much to say Neuroscience can tell us whether a defendant suffers from a brain abnormality or injury and it can correlate these neural deficits with criminal offending Using fMRI and other technologies it might indicate whether a witness is telling lies or the truth It can further propose neuro interventions to change the brains of offenders and so to reduce their propensity to offend And it can make suggestions about whether a defendant knows or merely suspects a prohibited state of affairs so drawing distinctions among the mental states that are central to legal responsibility Each of these matters has philosophical import is a neurological deficit inculpatory or exculpatory what is the proper role for law if the mind is no more than the brain is lying really a brain state and can neuroscience really read the brain In this edited collection leading contributors to the field

provide new insights on these matters bringing to light the great challenges that arise when disciplinary boundaries merge

Emergence in Mind Graham Macdonald, Cynthia Macdonald, 2010-04-29 There have long been controversies about how minds can fit into a physical universe In Emergence in Mind a distinguished group of philosophers discuss whether mental properties can be said to emerge from physical processes The discussion is extended to cover the role emergence may play in free will and agency and in the special sciences
