Colstrup, Kirsten Degel, 2016 With the first major presentation of Op Art and Kinetic Art in Scandinavia for more than 50 years Louisiana opens the door to a visual experimental laboratory with the whole range of media and techniques Op Art is an abbreviation of Optical Art and describes works which use ingeniously crafted optical illusions and effects that go straight to the core of our visual sensory apparatus The movement had its inception in the middle of the 1950s and its glory days in the 1960s when it established itself internationally across political and cultural contexts The artists were preoccupied with science the psychology of perception and the new technology of the time and turned their backs on old fashioned storytelling and romantic sensitivity While Kinetic and Optical Art originate from a particular time the results are surprisingly timeless and the movement has left striking marks in contemporary visual art and culture The direct appeal to the senses is unabated and is effective today in a mixture of instant fascination and nostalgia 00With around 100 works and more than 40 artists including Hungarian Victor Vasarely and English Bridget Riley in two of the main roles the exhibition opens the door to a visual experimental laboratory with the whole range of media and techniques 00Exhibition Louisiana Museum Humlebaek Denmark 04 02 05 06 2016

From Point to Pixel Meredith Hoy, 2017-01-03 In this fiercely ambitious study Meredith Anne Hoy seeks to reestablish the very definitions of digital art and aesthetics in art history She begins by problematizing the notion of digital aesthetics tracing the nineteenth and twentieth century movements that sought to break art down into its constituent elements which in many ways predicted and paved the way for our acceptance of digital art Through a series of case studies Hoy questions the separation between analog and digital art and finds that while there may be sensual and experiential differences they fall within the same technological categories She also discusses computational art in which the sole act of creation is the building of a self generating algorithm The medium isn't the message what really matters is the degree to which the viewer can sense a creative hand in the art
