

# OPEN DECISION FRAMEWORK

## PHASE: LAUNCH

### Steps you can take to be open

#### Begin with the end in mind

- Demonstrate alignment with Red Hat's strategy, mission, culture, and values
- Outline the steps you've taken to make this decision openly
- Highlight use of this framework
- Tell associates where to find detailed information
- Show how feedback shaped the decision or project
- Explain how to provide input after launch
- Acknowledge when you're not fully satisfied with the decision or know that others will not be
- Share your timeline or criteria for revisiting the decision
- Stay engaged with those who reject the decision

#### Default to open

- Reiterate relevant business requirements and constraints
- Share relevant legal, reporting, or confidentiality issues
- Communicate success criteria and publish relevant metrics

#### Contribute upstream

- Publish your methods, lessons learned, communications, and decision criteria to the archive, so others can review past decisions, learn why a decision was made, and see how leaders have responded to similar issues in the past
- Offer guidance to others on open decision making and choosing collaboration tools

### Questions to ask

- How will we monitor mailing lists and other feedback channels after the launch?
- If we have done early releases, will we continue to make incremental improvements based on feedback?
- How willing are we to make revisions based on feedback?
- What's a reasonable window of time for additional input and refinement?
- Did we overlook something important? How do we address it?
- Does the decision need to be revisited?
- Did open decision-making lead to the desired outcomes (slide 5)?
- How can we share our lessons learned and encourage open decision-making at Red Hat?

**Business Case Analysis with R** Robert D. Brown III, 2018-03-01 This tutorial teaches you how to use the statistical programming language R to develop a business case simulation and analysis. It presents a methodology for conducting business case analysis that minimizes decision delay by focusing stakeholders on what matters most and suggests pathways for minimizing the risk in strategic and capital allocation decisions. Business case analysis often conducted in spreadsheets exposes decision makers to additional risks that arise just from the use of the spreadsheet environment. R has become one of the most widely used tools for reproducible quantitative analysis and analysts fluent in this language are in high demand. The R language traditionally used for statistical analysis provides a more explicit flexible and extensible environment than spreadsheets for conducting business case analysis. The main tutorial follows the case in which a chemical manufacturing company considers constructing a chemical reactor and production facility to bring a new compound to market. There are numerous uncertainties and risks involved including the possibility that a competitor brings a similar product online. The company must determine the value of making the decision to move forward and where they might prioritize their attention to make a more informed and robust decision. While the example used is a chemical company, the analysis structure it presents can be applied to just about any business decision from IT projects to new product development to commercial real estate. The supporting tutorials include the perspective of the founder of a professional service firm who wants to grow his business and a member of a strategic planning group in a biomedical device company who wants to know how much to budget in order to refine the quality of information about critical uncertainties that might affect the value of a chosen product development pathway. What You'll Learn: Set up a business case abstraction in an influence diagram to communicate the essence of the problem to other stakeholders. Model the inherent uncertainties in the problem with Monte Carlo simulation using the R language. Communicate the results graphically. Draw appropriate insights from the results. Develop creative decision strategies for thorough opportunity cost analysis. Calculate the value of information on critical uncertainties between competing decision strategies to set the budget for deeper data analysis. Construct appropriate information to satisfy the parameters for the Monte Carlo simulation when little or no empirical data are available. Who This Book Is For: Financial analysts, data practitioners, and risk business professionals also appropriate for graduate level finance, business, or data science students.

**Management in Networks** J. A. de Bruijn, 2008 Getting what you want even if you are the boss isn't always easy. Almost every organization big or small works among a network of competing interests. Whether it's governments pushing through policies, companies trying to increase profits, or even families deciding where to move, house rarely can decisions be made in isolation from competing interests both within the organization and outside it. In this accessible and straightforward account, Hans de Bruijn and Ernst ten Heuvelhof cast light on multi-stakeholder decision making. Shunning simplistic models, they reveal the nuts and bolts of decision making within the numerous dilemmas and tensions at work.

Using a diverse range of illustrative examples throughout their perceptive analysis examines how different interests can either support or block change and the strategies available in managing a variety of stakeholders This insightful text provides both depth of understanding and a wealth of advice It is invaluable reading to students working in business and management public administration and organizational studies plus practitioners or actors operating in a range of contexts **Chinese Dream and Practice in Zhejiang — Society** Guangjin Chen,Jianhua Yang,2019-07-03 The theme of this book is the society construction in Zhejiang Province under the guidance of China Dream policy It adopts case studies analysis policy interpretations and practice summaries presents the field practice and achievements in the local society It exploits social studies areas such as social structure public affairs management urbanization social security as well as grassroots governance society safety issues in the Zhejiang province It also reveals a complete picture of the current society status in an analytical way It helps scholars and political practitioners worldwide better understand how the China Dream policy has influenced the local Chinese society **On the Verge of a Planetary Civilization** Sam Mickey,2014-09-18 On the Verge of a Planetary Civilization presents a philosophical contribution to integral ecology an emerging approach to the field that crosses disciplinary boundaries of the humanities and sciences In this original book Sam Mickey argues for the transdisciplinary significance of philosophical concepts that facilitate understandings of and responses to the boundaries involved in ecological issues Mickey demonstrates how much the provocative French philosopher Gilles Deleuze contributes to the development of such concepts situating his work in dialogue with that of his colleagues Felix Guattari and Jacques Derrida and with theorists who are adapting his concepts in contemporary contexts such as Isabelle Stengers Catherine Keller and the speculative realist movement of object oriented ontology The book focuses on the overlapping existential social and environmental aspects of the ecological problems pervading our increasingly interconnected planet It explores the boundaries between self and other humans and nonhumans sciences and humanities monism and pluralism sacred and secular fact and fiction the beginning and end of the world and much more **Data Collection, Processing, and Presentation** United States. Information Technology for Intellectual Property Protection: Interdisciplinary Advancements Sasaki, Hideyasu, 2011-11-30 Information technology for intellectual property protection has become an increasingly important issue due to the expansion of ubiquitous network connectivity which allows people to use digital content and programs that are susceptible to unauthorized electric duplication or copyright and patent infringement Information Technology for Intellectual Property Protection Interdisciplinary Advancements contains multidisciplinary knowledge and analysis by leading researchers and practitioners with technical backgrounds in information engineering and

institutional experience in intellectual property practice Through its discussions of both engineering solutions and the social impact of institutional protection this book fills a gap in the existing literature and provides methods and applications for both practitioners and IT engineers      *The Enigma of Failed Plans* Pasquale De Marco,2025-05-16 In the annals of human history countless attempts have been made to improve the human condition through grand social engineering projects From the collectivization of farms in the Soviet Union to the forced relocation of entire populations in China the twentieth century witnessed numerous large scale planning failures that resulted in widespread suffering and devastation This book delves into the underlying causes of these disastrous planning failures uncovering the common threads that run through these ill conceived schemes and identifying the factors that contribute to their tragic outcomes Drawing upon a wide range of case studies the book argues that these failures are not simply the result of bad luck or individual incompetence Rather they are rooted in deep seated flaws in the way we think about the world and our place in it We often succumb to the illusion of control believing that we can engineer society in a rational and predictable manner We place too much faith in experts and technocrats granting them the power to make decisions that affect the lives of millions without proper accountability We are blinded by the allure of perfection seeking to impose idealized blueprints onto complex and ever changing systems We neglect the importance of local knowledge and context assuming that one size fits all solutions can be applied to vastly different settings We fail to learn from history repeating the same mistakes over and over again And we underestimate the corrupting influence of power allowing it to concentrate in the hands of a few individuals or groups who are not subject to effective oversight The consequences of these failures are devastating Lives are lost livelihoods are destroyed and communities are torn apart The environment is plundered and the social fabric is frayed Yet despite the mounting evidence of the futility of such grand schemes we continue to fall prey to the same hubris and arrogance that have led to so much suffering in the past This book is a call for a more humble and realistic approach to social change It is a plea for greater humility recognizing the limits of our knowledge and the complexity of the world we inhabit It is an urgent appeal to abandon the failed ideologies of the past and to embrace a more participatory and inclusive approach to decision making Only by acknowledging our own fallibility and embracing the wisdom of diversity can we hope to avoid the mistakes of the past and build a more just and sustainable future for all If you like this book write a review on google books      **Deposit and**
