Martin,S. Pollard,2013-03-09 This book examines an abstract mathematical theory placing special emphasis on results applicable to formal logic If a theory is especially abstract it may find a natural home within several of the more familiar branches of mathematics This is the case with the theory of closure spaces It might be considered part of topology lattice theory universal algebra or no doubt one of several other branches of mathematics as well In our development we have treated it conceptually and methodologically as part of topology partly because we first thought of the basic structure involved closure space as a generalization of Frechet s concept  $V$  space  $V$  spaces have been used in some developments of general topology as a generalization of topological space Indeed when in the early 50s one of us started thinking about closure spaces we thought of it as the generalization of Frechet  $V$  space which comes from not requiring the null set to be CLOSURE SPACES AND LOGIC XII closed as it is in  $V$  spaces This generalization has an extreme advantage in connection with application to logic since the most important closure notion in logic deductive closure in most cases does not generate a  $V$  space since the closure of the null set typically consists of the logical truths of the logic being examined      **Scientific Canadian Mechanics' Magazine and Patent Office Record** Canada.
