**Memory as a**

**Programming Concept in C and C++** František Franěk, 2004 The overwhelming majority of bugs and crashes in computer programming stem from problems of memory access allocation or deallocation Such memory related errors are also notoriously difficult to debug Yet the role that memory plays in C and C programming is a subject often overlooked in courses and in books because it requires specialised knowledge of operating systems compilers computer architecture in addition to a familiarity with the languages themselves Most professional programmers learn entirely through experience of the trouble it causes This 2004 book provides students and professional programmers with a concise yet comprehensive view of the role memory plays in all aspects of programming and program behaviour Assuming only a basic familiarity with C or C the author describes the techniques methods and tools available to deal with the problems related to memory and its effective use

**Algorithms and Architectures for Parallel Processing** Sang-Soo Yeo, Jong Hyuk Park, Laurence Tianruo Yang, Ching-Hsien Hsu, 2010-05-29 It is our great pleasure to present the proceedings of the symposia and workshops on parallel and distributed computing and applications associated with the ICA3PP 2010 conference These symposia and workshops provide vibrant opportunities for researchers and industry practitioners to share their research experience original research results and practical development experiences in the new challenging research areas of parallel and distributed computing technologies and applications It was the first time that the ICA3PP conference series added symposia and workshops to its program in order to provide a wide range of topics that extend beyond the main conferences The goal was to provide a better coverage of emerging research areas and also forums for focused and stimulating discussions With this objective in mind we selected three workshops to accompany the ICA3PP 2010 conference FPDC 2010 the 2010 International Symposium on Frontiers of Parallel and Distributed Computing HPCTA 2010 the 2010 International Workshop on High Performance Computing Technologies and Applications M2A 2010 the 2010 International Workshop on Multicore and Multithreaded Architectures and Algorithms Each of the symposia workshops focused on a particular theme and complemented the spectrum of the main conference All papers published in the workshops proceedings were selected by the Program Committee on the basis of referee reports Each paper was reviewed by independent referees who judged the papers for originality quality contribution presentation and consistency with the theme of the workshops OOPSLA ECOOP '90

Stochastic Models for Fault Tolerance Katinka Wolter,2010-06-17 As modern society relies on the fault free operation of complex computing systems system fault tolerance has become an indispensable requirement Therefore we need

mechanisms that guarantee correct service in cases where system components fail be they software or hardware elements Redundancy patterns are commonly used for either redundancy in space or redundancy in time Wolter s book details methods of redundancy in time that need to be issued at the right moment In particular she addresses the so called timeout selection problem i e the question of choosing the right time for different fault tolerance mechanisms like restart rejuvenation and checkpointing Restart indicates the pure system restart rejuvenation denotes the restart of the operating environment of a task and checkpointing includes saving the system state periodically and reinitializing the system at the most recent checkpoint upon failure of the system Her presentation includes a brief introduction to the methods their detailed stochastic description and also aspects of their efficient implementation in real world systems The book is targeted at researchers and graduate students in system dependability stochastic modeling and software reliability Readers will find here an up to date overview of the key theoretical results making this the only comprehensive text on stochastic models for restart related problems      Capability-Based Computer Systems Henry M. Levy, 2014-05-16 Capability Based Computer Systems focuses on computer programs and their capabilities The text first elaborates capability and object based system concepts including capability based systems object based approach and summary The book then describes early descriptor architectures and explains the Burroughs B5000 Rice University Computer and Basic Language Machine The text also focuses on early capability architectures Dennis and Van Horn s Supervisor CAL TSS System MIT PDP 1 Timesharing System and Chicago Magic Number Machine are discussed The book then describes Plessey System 250 Cambridge CAP Computer and Hydra System The selection also discusses STAROS System and IBM System 38 STAROS object support and abstract type management as well as IBM System 38 profiles and authority and programs procedures are described The book highlights Intel iAPX 432 and then considers segment and objects program execution storage resources and abstraction support Problems related with capability based architectures are also noted The text is a good source for readers wanting to study computer programming      **Computerworld** ,1976-11-15 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network
