

Internal Labor Market

- A worker typically enters an internal labor market at the least-skilled port-of-entry job in the job ladder or mobility chain.
- While the wage rate of the port-of-entry job will be strongly influenced by the forces of demand and supply in the local external labor market, wage rates and the allocation of workers within the internal labor market are governed primarily by administrative rules and procedures.

Operation Of Internal Labor Markets:

The Operation of Internal Labor Markets Lawrence T. Pinfield, 2013-11-22 Employment systems consist of complex arrays of formal and informal rules that structure the relationships between employees and employers. There are many different types of employment systems. Some are specified in considerable detail in collectively bargained quasilegal employment contracts, while others are left to discretion. This book describes the latter type of employment system, one in which there is an active market for knowledge and skills. This is the salaried employment system of ForestCo, a large multiplant manufacturing company in the forest products industry. Here supervisors and managers actively adjust the jobs and persons under their authority to meet the market, social, and institutional forces that influence the activities and performance of their departments. The study of employment systems is a relatively recent phenomenon, and few prior studies or theories were found to guide this investigation. Neither the scope nor the components of employment system studies are yet established. The field is confused and contested. Nevertheless, there is related literature which can be used to focus attention on different features of employment systems. One emerging body of work that holds the most promise for the study of employment systems is internal labor market (ILM) theory.

Length of Service and the Operation of Internal Labor Markets

Katharine G. Abraham, 1983 *Internal Labor Markets and Employment Transitions in South Korea* Kim Sunghoon, 2005 This book examines the value Korean employers and workers place on stable employment, with a focus on the workers' want for more desirable transition outcomes as modified by various individual and structural factors, particularly labor market structure. Results of the analysis show that internal labor market structure has increased employment stability and the desirability of transition outcomes in Korea over time. Korea's industrialization has enabled internal labor market structure to mature to a level that has increased employment stability and the desirability of transition outcomes. This implies that Korea has experienced industrialization in such a short period that internal labor market structure has not matured enough to influence the ways in which other factors affect employment transition patterns. Results of the effects of labor market structure and other factors on employment transition patterns imply that Korea's industrialization has had mixed effects on workers' economic and social well-being. On the one hand, it has improved the overall level of workers' well-being; yet on the other hand, it has increased heterogeneity in well-being among different types of workers.
