Operational Conflict Analysis:

Operational Conflict Analysis Norman A. Bailey, Stuart M. Feder, 1973 *The EU's Approach to Conflict Analysis in Integrated Conflict Interventions* Kieran Doyle, Sean Mc Gearty, 2025-02-26 This book aims to critically examine the European Union's peacebuilding approach focusing on integrated conflict analysis suggesting a new model for conflict analysis within the EU Common Security and Defence Policy. It explores recent interventions while also addressing the need for improved conflict sensitivity. It argues that greater self-reflexivity and deeper reflection on motivations for intervention plays a critical role within multilateral efforts to address implementation gaps. It encourages greater analytical capacity, suggests categories of partnership interaction with other actors and gives centrality to the EU's integrated approach, reorienting away from the growing emphasis on securitisation. It is aimed at policy makers and practitioners asking questions of contemporary analysis frameworks which validate causal pathways and currently provide the basis of the international peace architecture.

Handbook of Conflict Analysis and Resolution Dennis J.D. Sandole, Sean Byrne, Ingrid Sandole-Staroste, Jessica Senehi, 2008-07-31 This major Handbook is a collection of work from leading scholars in the Conflict Analysis and Resolution (CAR) field. The central theme is the value of interdisciplinary approaches to the analysis and resolution of conflicts.

Combat operations C&I fundamentals and interactions , Perspectives on Multinational Intelligence Cooperation for Peace Operations , 2008 *Bourdieuian Field Theory as an Instrument for Military Operational Analysis* Håkan Gunneriusson, 2017-09-18 This book is open access under a CC BY 4.0 license. This book uses Pierre Bourdieu's field theory as a lens through which to examine military operations. Novel in its approach, this innovative text provides a better, more nuanced understanding of the modern battlespace, particularly in instances of prolonged low-intensity conflict. Formed in two parts, this book primarily explores the scope of Bourdieuian theory before secondly providing a detailed case study of the Yugoslavian succession war of 1990-1992. Gunneriusson suggests that although theories do not necessarily provide answers, they do help us ask better questions. This volume suggests new lines of interdisciplinary investigation that will be of interest to members of armed forces, practitioners from NGOs and policymakers. **Operations Research Proceedings 2023**

Guido Voigt, Malte Fliedner, Knut Haase, Wolfgang Brüggemann, Kai Hoberg, Joern Meissner, 2025-08-23 This book gathers a selection of peer-reviewed papers presented at the International Conference on Operations Research (OR) 2023, which was held at Universität Hamburg, Germany, August 29-September 1, 2023. More than 700 scientists, practitioners, and students from mathematics, computer science, business, economics, and related fields attended the conference and presented more than 500 papers in plenary presentations, parallel topic streams, as well as special award sessions. The book discusses classical mathematical optimization, statistics, and simulation techniques. These are complemented by computer science methods and by tools for processing data, designing and implementing information systems. The book also examines recent advances in information technology which allow big data volumes to be processed and enable real-time predictive and prescriptive

Determinants of Success in UN Peacekeeping Operations Jacques L. Koko,Essoh J. M. C. Essis,2012-06-16 This book examines forty six UN peacekeeping operations initiated from 1956 through 2006 to manage cases of intrastate and interstate conflicts to identify the most significant factors that could help to explain the success or lack of success of such operations Factor analysis is used to exploit the correlations between independent variables in order to regroup them into a smaller set of factors explaining the success or failure of these operations The results show that the success of a UN peacekeeping operation can be explained by factors that are related to four categories of variables i the scope of resources invested in peacekeeping ii the duration and intensity of conflict and time of preparation for peacekeeping intervention iii the political support for peacekeeping from the UN Security Council and iv the type of conflict

Business Process Models Christian Gerth,2013-05-21 Driven by the need for a closer alignment of business and IT requirements the role of business process models in the development of enterprise software systems has increased continuously Similar to other software artifacts process models are developed and refined in team environments by several stakeholders resulting in different versions These versions need to be merged in order to obtain an integrated process model Existing solutions to this basic problem in the field of software configuration management are mainly limited to textual documents e g source code This monograph presents a generally applicable framework for process model change management which provides easy to use comparison and merging capabilities for the integration of different process model versions The framework supports popular modeling languages such as BPMN BPEL or UML Activity Diagrams Differences between process models are represented in terms of intuitive high level change operations Equipped with a sophisticated analysis of dependencies and a semantic aware computation of conflicts between differences the framework constitutes a comprehensive and practically usable solution for process model change management in the model driven development of enterprise software systems

Ardenne-1944: An Analysis Of The Operational Defense Major Francis M. Cain III,2014-08-15 This study examines the nature of the defense at the operational level of war by analyzing the Battle of the Bulge in Dec 1944 using the concepts of blitzkrieg and web defense The monograph begins by discussing the influence of defensive theory on the operational concepts of blitzkrieg and web defense The German concept of blitzkrieg incorporates Clausewitz s theory of the offense by emphasizing surprise speed and concentration at the decisive point The counter to the blitzkrieg offense is found in COL F O Miksche s concept of web defense The Battle of the Bulge provides an

excellent example of a web defense pitted against a blitzkrieg offense The German blitzkrieg in the Ardennes in 1944 failed for many reasons 1 Army Group B did not concentrate its strength against the most vulnerable section of the Allied line 2 The rugged Ardennes terrain could be easily defended against attacks by mechanized forces 3 Key American commanders Eisenhower Gerow and Middleton quickly recognized the value of holding several key road junctions St Vith Malmedy Bastogne Marche and Rochefort which dominated movement through the Ardennes 4 The Allies held the shoulders of the German penetration 5 The Allies quickly concentrated armored and motorized units to blunt the German penetration and 6 Army Group B lacked operational reserves and adequate logistic support The analysis of the Ardennes shows that the defense is indeed the stronger form of war and that a web defense can be employed effectively against a blitzkrieg offense The Allies effectively used a web defense to counter these threats If NATO is to defeat a Soviet attack without resorting to the use of nuclear weapons it must adopt a viable operational defensive concept Web defense is such a concept **Catalog of**

Robert Mckellar,2023-06-19 Macro level dynamics and modelling are well represented in the mainstream political risk literature However not many writings on the subject get their hands dirty in terms of revealing the hard nuanced and practical work behind knowing what the issues might be for a specific foreign operation in a sensitive or volatile context and how to plan for them Political Risk Intelligence for Business Operations in Complex Environments provides international managers and by extension their organisations with a foundational understanding of political risk analysis and planning for on the ground operations in challenging times and places This means having a fluid grasp of what political risk means and why it matters in the organisation s context and how relevant intelligence can be gathered and analysed to inform decisions and planning towards an operation s socio political resilience The book explains How and why political risk manifests and the forms it can take Company attitudes and operational attributes as a political risk variable Understanding the operational implications of socio political dynamics and trends Stakeholder identification and analysis for informed engagement planning Scenario analysis to prepare for long term contingencies and discontinuities Holistic intelligence driven political risk management planning Tactical intelligence exercises to maintain awareness and inform adaptation Intelligence management

collection and quality control Ethical considerations in political risk management Rather than being bound by conventional notions of risk the book emphasises the dynamic relationship between a foreign operation and its host environment and milieu as a source of both challenges and opportunities to manage them Concepts frameworks and practices are rounded out with real world examples and relevant lessons from the author s experience as a political risk consultant *Integration of Constraint Programming, Artificial Intelligence, and Operations Research* Emmanuel Hebrard,Nysret Musliu,2020-09-18 The volume LNCS 12296 constitutes the papers of the 17th International Conference on the Integration of Constraint Programming Artificial Intelligence and Operations Research which will be held online in September 2020 The 32 regular papers presented together with 4 abstracts of fast track papers were carefully reviewed and selected from a total of 72 submissions Additionally this volume includes the 4 abstracts and 2 invited papers by plenary speakers The conference program also included a Master Class on the topic Recent Advances in Optimization Paradigms and Solving Technology
