Scheduling Pierre Lopez,François Roubellat,2013-03-01 The performance of an company depends both on its technological expertise and its managerial and organizational effectiveness Production management is an important part of the process for manufacturing firms The organization of production relies in general on the implementation of a certain number of basic functions among which the scheduling function plays an essential role This title presents recently developed methods for resolving scheduling issues The basic concepts and the methods of production scheduling are introduced and advanced techniques are discussed providing readers with a comprehensive and accessible guide to employing this process

Manufacturing Systems Engineering Katsundo Hitomi,2017-10-19 This second edition of the classic textbook has been written to provide a completely up to date text for students of mechanical industrial manufacturing and production engineering and is an indispensable reference for professional industrial engineers and managers In his outstanding book Professor Katsundo Hitomi integrates three key themes into the text manufacturing technology production management industrial economics Manufacturing technology is concerned with the flow of materials from the acquisition of raw materials through conversion in the workshop to the shipping of finished goods to the customer Production management deals with the flow of information by which the flow of materials is managed efficiently through planning and control techniques Industrial economics focuses on the flow of production costs aiming to minimise these to facilitate competitive pricing Professor Hitomi argues that the fundamental purpose of manufacturing is to create tangible goods and it has a tradition dating back to the prehistoric toolmakers The fundamental importance of manufacturing is that it facilitates basic existence it creates wealth and it contributes to human happiness manufacturing matters Nowadays we regard manufacturing as operating in these other contexts beyond the technological It is in this unique synthesis that Professor Hitomi s study constitutes a new discipline manufacturing systems engineering a system that will promote manufacturing excellence Key Features The classic textbook in manufacturing engineering Fully revised edition providing a modern introduction to manufacturing technology
