Galilei,1978 **Operations of the geometric and military compass (Le operazioni del compasso geometrico et militare, engl.) 1606** Galileo Galilei,1978 Geometrical Objects Anthony Gerbino,2014-07-21 This volume explores the mathematical character of architectural practice in diverse pre and early modern contexts It takes an explicitly interdisciplinary approach which unites scholarship in early modern architecture with recent work in the history of science in particular on the role of practice in the scientific revolution As a contribution to architectural history the volume contextualizes design and construction in terms of contemporary mathematical knowledge attendant forms of mathematical practice and relevant social distinctions between the mathematical professions As a contribution to the history of science the volume presents a series of micro historical studies that highlight issues of process materiality and knowledge production in specific situated practical contexts Our approach sees the designer s studio the stone yard the drawing floor and construction site not merely as places where the architectural object takes shape but where mathematical knowledge itself is deployed exchanged and amplified among various participants in the building process

The Emergence of a Scientific Culture Stephen Gaukroger,2008-10-23 Why did science emerge in the West and how did scientific values come to be regarded as the yardstick for all other forms of knowledge Stephen Gaukroger shows just how bitterly the cognitive and cultural standing of science was contested in its early development Rejecting the traditional picture of secularization he argues that science in the seventeenth century emerged not in opposition to religion but rather was in many respects driven by it Moreover science did not present a unified picture of nature but was an unstable field of different often locally successful but just as often incompatible programmes To complicate matters much depended on attempts to reshape the persona of the natural philosopher and distinctive new notions of objectivity and impartiality were imported into natural philosophy changing its character radically by redefining the qualities of its practitioners The West s

sense of itself its relation to its past and its sense of its future have been profoundly altered since the seventeenth century as cognitive values generally have gradually come to be shaped around scientific ones Science has not merely brought a new set of such values to the task of understanding the world and our place in it but rather has completely transformed the task redefining the goals of enquiry This distinctive feature of the development of a scientific culture in the West marks it out from other scientifically productive cultures In *The Emergence of a Scientific Culture* Stephen Gaukroger offers a detailed and comprehensive account of the formative stages of this development and one which challenges the received wisdom that science was seen to be self evidently the correct path to knowledge and that the benefits of science were immediately obvious to the disinterested observer

Descartes and the Hyperbolic Quest D. Graham Burnett, 2005 In 1629 the natural philosopher Ren Descartes enticed a young artisan to undertake a secretive project one that promised to revolutionize early modern astronomy Descartes believed he had conceived a new kind of telescope lens shaped by the light of reason itself surpassing anything ever to come from the hands of the glass working craftsmen of the era These novel lenses would never be touched by human hands they would be cut by an elaborate machine a self regulating automatic device This study traces the inception development finally the collapse of this ambitious enterprise which absorbed the energies attentions of a broad range of 17th century savants including Huygens Wren Hevelius Hooke even Newton Illus

History of Technology Volume 31 Ian Inkster, 2012-11-22 New work on early modern Europe has now opened up the hidden avenues that link changes of technologies with a complex of cognitive institutional spatial and cultural elements It is true that all divisions of history wish to incorporate all other divisions unto themselves but in the essays of our first collection there are specific cases and analyses clearly delineated to show how technologies and systems for the production reproduction and representation of technological changes emerged out of fundamental aspects of European society and mentality The question must be How far were such fundamental aspects unique in their entirety and configuration to Europe The second collection on patent agency takes the modern industrialization of Europe as its focus and illustrates the manner in which systems of intellectual property rights generated manifold agencies that acted to both spread and control the use of knowledge in advanced sites Patent agency has been generally neglected by historians one reason for this being the difficulty of defining effective agency beyond the obvious confines of those who were actually trained and remunerated as agents of invention Informal networks or sites may have been crucial in converting general patent systems into local environs of technical advance

The Copernican Question Robert Westman, 2020-04-21 In 1543 Nicolaus Copernicus publicly defended his hypothesis that the earth is a planet and the sun a body resting near the center of a finite universe But why did Copernicus make this bold proposal And why did it matter The Copernican Question reframes this pivotal moment in the history of science centering the story on a conflict over the credibility of astrology that erupted in Italy just as Copernicus arrived in 1496 Copernicus engendered enormous resistance when he sought to protect astrology by reconstituting its astronomical foundations Robert S Westman shows that efforts to answer the astrological skeptics became a crucial unifying theme of the early modern scientific movement His interpretation of this long sixteenth century from the 1490s to the 1610s offers a new framework for understanding the great transformations in natural philosophy in the century that followed

Galileo's Idol Nick Wilding, 2014-11-27 Galileo's Idol offers a vivid depiction of Galileo's friend student and patron Gianfrancesco Sagredo 1571-1620 Sagredo's life which has never before been studied in depth brings to light the inextricable relationship between the production distribution and reception of political information and scientific knowledge Nick Wilding uses as wide a variety of sources as possible paintings ornamental woodcuts epistolary hoaxes intercepted letters murder case files and others to challenge the picture of early modern science as pious serious and ecumenical Through his analysis of the figure of Sagredo Wilding offers a fresh perspective on Galileo as well as new questions and techniques for the study of science The result is a book that turns our attention from actors as individuals to shifting collective subjects often operating under false identities from a world made of sturdy print to one of frail instruments and mistranscribed manuscripts from a complacent Europe to an emerging system of complex geopolitics and globalizing information systems and from an epistemology based on the stolid problem of eternal truths to one generated through and in the service of playful politically engaged and cunning schemes

Distinguished Figures in Descriptive Geometry and Its Applications for Mechanism Science Michela

Cigola, 2015-07-27 This book consists of chapters that focus specifically on single figures that worked on Descriptive Geometry and also in Mechanisms Sciences and contain biographical notes a survey of their work and their achievements together with a modern interpretation of their legacy Since Vitruvius in ancient times and with Brunelleschi in the Renaissance the two disciplines began to share a common direction which over the centuries took shape through less well known figures until the more recent times in which Gaspard Monge worked Over the years a gap has been created between Descriptive Geometry and Mechanism Science which now appear to belong to different worlds In reality however there is a very close relationship between the two disciplines with a link based on extremely solid foundations Without the theoretical foundations of Geometry it would not be possible to draw and design mechanical parts such as gears while in Kinematics it would be less easy to design and predict the reciprocal movements of parts in a complex mechanical assembly
