Ordered Median Problem: Models and Solution Methods Patricia Dominguez-Marin,2013-12-11 This is the first book about the discrete ordered median problem DOMP which unifies many classical and new facility location problems Several exact and heuristic approaches are developed in this book in order to solve the DOMP Audience The book is suitable for researchers in location theory and graduate students in combinatorial optimization **Project Scheduling with Time**

Windows and Scarce Resources Klaus Neumann,Christoph Schwindt,Jürgen Zimmermann,2013-06-29 A project is a unique undertaking or endeavor to be accomplished that can be divided into individual subtasks or activities each of which

requires time and scarce resources for its completion. Also there is a desired objective to be attained for example minimization of project duration or of variation of resource utilization or maximization of net present value of the project. Moreover there are given precedence relationships among activities prescribing the order in which activities must be carried out. Project scheduling in its basic form consists of finding start times for all activities such that prescribed resource and precedence constraints are satisfied and an objective function is optimized. Since the concept of a project can be interpreted quite broadly project scheduling problems arise in a great variety of practical situations. These include construction work, the development and introduction of new products, service systems or software packages, strategic long term planning in manufacturing and the service sector, emergency planning and even the conducting of political campaigns. Recently project scheduling has been successfully applied to production and operations management e.g. make to order production in manufacturing and batch production in process industries. Since the late 1950s network based planning methods for project scheduling problems have been developed (cf. Elmaghraby 1977 and Moder et al.).

Time Series Analysis: Methods and Applications, 2012-05-18
 The field of statistics not only affects all areas of scientific activity but also many other matters such as public policy. It is branching rapidly into so many different subjects that a series of handbooks is the only way of comprehensively presenting the various aspects of statistical methodology, applications and recent developments. The Handbook of Statistics is a series of self-contained reference books. Each volume is devoted to a particular topic in statistics, with Volume 30 dealing with time series. The series is addressed to the entire community of statisticians and scientists in various disciplines who use statistical methodology in their work. At the same time special emphasis is placed on applications-oriented techniques with the applied statistician in mind as the primary audience. Comprehensively presents the various aspects of statistical methodology. Discusses a wide variety of diverse applications and recent developments. Contributors are internationally renowned experts in their respective areas.

Operational Freight Carrier Planning
 Jörn Schönberger, 2006-03-30
 This book represents the compilation of several research approaches on operational freight carrier planning carried out at the Chair of Logistics, University of Bremen. It took nearly three years from the first ideas to the final version now in your hands. During this time several persons helped me all the time to keep on going and to restart when I got stuck in a dead end or when I could not see the wood for the trees. I am deeply indebted to them for their

encouragement and comments Prof Dr Herbert Kopfer holder of the Chair of Logistics introduced me into the field of operational transport planning He motivated and supervised me Furthermore he supported me constantly and allowed me to be as free as possible in my research and encouraged me to be as creative as necessary In addition I have to thank Prof Dr Hans Dietrich Haasis Prof Dr Martin G Mohrle and Prof Dr Thorsten Poddig On behalf of all my colleagues who supported me in numerous ways I have to say thank you to Prof Dr Dirk C Mattfeld Prof Dr Christian Bierwirth Henner Gratz Prof Dr Elmar Erkens Nadja Shigo and Katrin Dorow They all helped me even with my most obscure and dubious problems My family supported me all the time They always showed me their trust and encouraged me continuously Special thanks are dedicated to my parents Monika and Heinz Jiirgen

Supply Chain Management and Reverse Logistics Harald Dyckhoff, Richard Lackes, Joachim Reese, 2013-06-05 The world of logistics has considerably changed due to globalization modern information technology and especially increasing ecological awareness Large Supply Chain Management SCM systems are developing to global logistic networks This book reflects major trends of the recent decade in SCM and additionally presents ideas and visions for logistic networks of the 21st century Among the various aspects of SCM emphasis is placed on reverse logistics closing the loop of a supply chain by integrating waste materials into logistic management decisions

Applications of Management Science Kenneth D. Facility Location Zvi Drezner, Horst W. Hamacher, 2004-05-03 The book covers both theory and applications of locational analysis LocAn The reader will see the power of LocAn models in various real world contexts varying from communication design to robotics and mail delivery It is divided into two parts The first part contains an overview of some of the LocAn methodologies The second part describes in thorough detail some selected applications The text provides researchers with an excellent and well thought out review of available location models

Sat2000 Ian Gent, Hans van Maaren, Toby Walsh, 2000 The book is devoted to various disciplines in satisfiability research and aims to give the reader an impression of the state of the art of this research in the year 2000 It consists of a compilation of articles on this subject which have appeared or will appear in the periodicals The disciplines covered fall not entirely neatly into four categories complete methods stochastic methods applications and extensions beyond propositional SAT

Metaheuristics El-Ghazali Talbi, 2009-05-27 A unified view of metaheuristics This book provides a complete background on metaheuristics and shows readers how to design and implement efficient algorithms to solve complex optimization problems across a diverse range of applications from networking and bioinformatics to engineering design routing and scheduling It presents the main design questions for all families of metaheuristics and clearly illustrates how to implement the algorithms under a software framework to reuse both the design and code Throughout the book the key search components of metaheuristics are

considered as a toolbox for Designing efficient metaheuristics e g local search tabu search simulated annealing evolutionary algorithms particle swarm optimization scatter search ant colonies bee colonies artificial immune systems for optimization problems Designing efficient metaheuristics for multi objective optimization problems Designing hybrid parallel and distributed metaheuristics Implementing metaheuristics on sequential and parallel machines Using many case studies and treating design and implementation independently this book gives readers the skills necessary to solve large scale optimization problems quickly and efficiently It is a valuable reference for practicing engineers and researchers from diverse areas dealing with optimization or machine learning and graduate students in computer science operations research control engineering business and management and applied mathematics Kanban-Controlled Manufacturing Systems Georg Krieg, 2006-03-30 5th Werner Kern Award for Productivity Research 2005 Kanban control systems bear a great potential to significantly improve operations A company may reap the full benefits of kanban control only after determining an optimal or near optimal system configuration To do that methods are needed to evaluate the performance and operating costs of individual system configurations We propose an innovative construction kit approach that enables us to build stochastic analytical models of a large class of single and multi product kanban systems The presented construction kit approach may be extended and augmented in various directions
