Opportunities And Uses Of The Ocean:

Opportunities and Uses of the Ocean David A. Ross, 2012-12-06 The oceans cover about 72 percent of our planet which is named for the remaining 28 percent These oceans have fascinated and challenged the human race for centuries In the past the ocean had been used first as a source of food and later as a means of transportation However the oceans have recently become very important they may offer a solution to many of our modern problems For example refuse from land is to be dumped into the ocean never to be seen again fish and other biological resources are to be caught and used to meet the protein deficiency of the world oil and gas from the continental shelf and perhaps deeper areas will eventually solve our energy problems None of these examples is completely possible and the at source of food and later as a means of transportation However the oceans social and ecological problems in the marine environment Countries are already planning how the oceans can be divided up so that they will get their fair share Economists politicians and others are producing almost daily optimistic or pessimistic views depending upon your own viewpoint about the ocean and its resources Equally loud reports come from environmentalists conservationists government sources and oil companies concerning the pollution and potential destruction of the ocean Opportunities and Uses of the Ocean David A. Fudge, 2023-12-05 In the last decade the concept of a Blue Economy has ignited a deep theoretical debate Ranging from the integration of the triple bottom line of sustainability to the optimization of profit from ocean exploitation the meaning of the term blue economy differs considerably between epistemic communities and even more so among national and regional policies There is a general sense of the opportunity to realise enhanced social and economic benefits from the sustainable utilisation of their ocean and coastal resources under the umbrella framework of blue economy Blue economy is gaining traction already as a significant component of national policies even in spite of a clear conceptualization of the term Many countries are now preparing national policies towards realising their blue economy ambitions utilizing the concept as they see fit Likewise multilateral and regional organisations are developing guidelines and providing investment in new research technologies and financing tools that promote blue economy Critical challenges abound in particular in less privileged countries These include the gap in research capabilities governments prioritizing social wellbeing and economic profit in contrast to environmental protection the identification of new and emerging areas of ocean economic activity that are both socially and ecologically sustainable and holds viable business models that can attract private investment **Business Bites** CA Hemant Kumar
