labor supply by broadening the analysis to the allocation of time over the individual's life the interdependencies of supply decisions within the family and finally to the formation of the family itself Similarly contract theory has moved from a theory that explains the existence of closed economic institutions to a theory of their formation and internal operation The hallmark of both of these developments is the extension and application of analytical techniques based on purposive maximization under constraints and the interaction of individual decision makers through a competitive market or its analogue

The Navy's Search for a Few Good Women Ronda J. Beagle, 1993 The purpose of this thesis was to attempt to select significant individual characteristics of women who met Navy Recruiting Command standards for enlisting in technical rates Additionally it attempted to select geographic characteristics of these qualified women To that end a logistic regression analysis was conducted on data from approximately 100 000 qualified high school juniors and seniors For a student to be qualified for this study she must have scored above the 31st percentile on the AFQT and above the 50th percentile on one of three subtests Auto Shop Information Electronics Information or Mechanical Comprehension The database contained Military Entrance Processing Command files and 1990 Census data This research found for individual regression models interaction effects were present between future plans and geographic area and between service preference and geographic area when determining interest in the military It found for geographic regression models the proportion of students interested in military service out of those available increased in geographic areas Naval Recruiting Districts where more personnel were in the armed forces more people were associated with technical occupations and where median family income was higher The analysis found the proportion of students available for military service out of the target market population females aged 17-21 years decreased in geographic areas where unemployment rate was higher more people were associated with technical occupations more people lived below the poverty level and where median family income was higher

[The Social and Economic Impact of New Technology 1978-84: A Select Bibliography](#) Leslie Grayson,2012-12-06 Silicon chip technology microprocessor technology information technology or quite simply new technology These are some of the names representing the microelectronics revolution depending upon the audience being addressed by speaker or writer No previous new industrial development has caused such widespread publicity and discussion amongst users and researchers as the new technology Concern is being expressed about the effects of new technology on employment job satisfaction social life leisure activities and the economics of commerce and industry The late 70s saw many doom laden predictions of those effects but by 1983 both management and trade unions were taking a more objective view of the social and economic impacts and many correspondents now see the new technology as a means of opening up new industries and overcoming the effects of world recessions The chip has involved the factory floor the office the supermarket and the home Electronic funds transfer electronic shopping microelectronic domestic appliances word processors and microprocessor controlled machinery mean that the new technology has pervaded all aspects of social and economic life and the developed countries are now coming to accept it as part of society as a whole Inevitably the flood of literature on the social and economic impacts of new technology has been overwhelming Unfortunately the quality of information and arguments propagated at conferences in journal papers and research reports has indicated that there has been little quantifiable evidence available on the effects of these impacts

[International Trade with Equilibrium Unemployment](#) Carl Davidson,Steven J. Matusz,2010 While most standard economic models of international trade assume full employment Carl Davidson and Steven Matusz have argued over the past two decades that this reliance on full employment modeling is misleading and ill equipped to tackle many important trade related questions This book brings together the authors pioneering work in creating models that more accurately reflect the real world connections between international trade and labor markets The material collected here presents the theoretical and empirical foundations of equilibrium unemployment modeling which the authors and their collaborators developed to give researchers and policymakers a more realistic picture of how international trade affects labor markets and of how transnational differences in labor markets affect international trade They address the shortcomings of standard models

describe the empirics that underlie equilibrium unemployment models and illustrate how these new models can yield vital insights into the relationship between international trade and employment This volume also includes an indispensable general introduction as well as concise section introductions that put the authors work in context and reveal the thinking behind their ideas Economists are only now realizing just how important these ideas are making this book essential reading for researchers and students
