Grattan, B.T. Meggitt, 2013-03-09 Environmental and chemical sensors in optical fiber sensor technology The nature of the environment in which we live and work and the precarious state of many aspects of the natural environment has been a major lesson for scientists over the last few decades Public awareness of the issues involved is high and often coupled with a scepticism of the ability of the scientist and engineer to provide an adequate or even rapid solution to the preservation of the environment before further damage is done and to achieve this with a minimum of expenditure Monitoring of the various aspects of the environment whether it be external or internal to ourselves and involving chemical physical or biomedical parameters is an essential process for the well being of mankind and of the individual Legislative requirements set new standards for measurement and control all around us which must be met by the most appropriate of the technologies available commensurate with the costs involved Optical fiber sensor technology has a major part to play in this process both to complement existing technologies and to promote new solutions to difficult measurement issues The developments in new sources and detectors covering wider ranges of the electromagnetic spectrum with higher sensitivity allow the use of techniques that some time ago would have been considered inappropriate or lacking in sufficient sensitivity **Fiber Optic Sensors** Ignacio R. Matias, Satoshi Ikezawa, Jesus Corres, 2016-11-01 This book describes important recent developments in fiber optic sensor technology and examines established and emerging applications in a broad range of fields and markets including power engineering chemical engineering bioengineering biomedical engineering and environmental monitoring Particular attention is devoted to niche applications where fiber optic sensors are or soon will be able to compete with conventional approaches Beyond novel methods for the sensing of traditional parameters such as strain temperature and pressure a variety of new ideas and concepts are proposed and explored The significance of the advent of extended infrared sensors is discussed and individual chapters focus on sensing at THz frequencies and optical sensing based on photonic crystal structures Another important topic is the resonances generated when using thin films in conjunction with optical fibers and the enormous potential of sensors based on lossy mode resonances surface plasmon resonances and long range surface exciton polaritons Detailed attention is also paid to fiber

Bragg grating sensors and multimode interference sensors Each chapter is written by an acknowledged expert in the subject under discussion

Optical Fiber Sensor Technology L.S. Grattan, B.T. Meggitt, 1997-12-31 Progress in optical fiber sensors The field of optical fiber sensor technology is one that continues to expand and develop at a rate that could barely have been predicted a few years ago The wealth of publications appearing in the technical literature and the burgeoning number of papers presented at the now well established series of national and international conferences which are attended by a wide selection of technically qualified optoelectronics professionals gives a clear indication of both the range and scale of the devices and applications now seen in the subject Such a rapid expansion makes it very difficult for the scientist and engineer under pressure to be both informed and effective for an employer to attend all these meetings selectively read the appropriate literature and be able quickly to gain the knowledge in those specific areas which will give the best advantage for the work in hand To that end this volume has been planned and carefully designed to provide an essential overview and detailed specific information on those novel and exciting aspects of optical fiber sensor technology that have recently emerged with particular focus on the devices and the exciting applications of this part of optoelectronic technology in the vast international measurement and instrumentation area
