**Communications Systems** Narottam Das,2012-03-07 Optical communications systems are very important for all types of telecommunications and networks They consists of a transmitter that encodes a message into an optical signal a channel that carries the signal to its destination and a receiver that reproduces the message from the received optical signal This book presents up to date results on communication systems along with the explanations of their relevance from leading

researchers in this field Its chapters cover general concepts of optical and wireless optical communication systems optical amplifiers and networks optical multiplexing and demultiplexing for optical communication systems and network traffic engineering Recently wavelength conversion and other enhanced signal processing functions are also considered in depth for optical communications systems The researcher has also concentrated on wavelength conversion switching demultiplexing in the time domain and other enhanced functions for optical communications systems This book is targeted at research development and design engineers from the teams in manufacturing industry academia and telecommunications service operators providers

*Computer Science and Operations Research: New Developments in their Interfaces* Osman Balci,2014-05-23 The interface of Operation Research and Computer Science although elusive to a precise definition has been a fertile area of both methodological and applied research The papers in this book written by experts in their respective fields convey the current state of the art in this interface across a broad spectrum of research domains which include optimization techniques linear programming interior point algorithms networks computer graphics in operations research parallel algorithms and implementations planning and scheduling genetic algorithms heuristic search techniques and data retrieval
