Optical Storage And Optical Information Processing V4081:

Optical Storage and Optical Information Processing H.-P. D. Shieh, Tom D. Milster, 2000 *Optical Information Processing* Frances T. S. Yu, 1983 A thorough practical introduction to modern optical information processing Covers diffraction information processing and holography Approaches analysis by means of impulse response and linear system theory Presents the white light optical processing technique as well as rainbow holography **Optical Information Processing** E. Barrekette, 2013-12-11 This is the second volume on Optical Information Processing within the scope of the US USSR Science Cooperation Program co sponsored by the US National Science Foundation and the USSR Academy of Sciences Siberian Branch Volume I was published in 1976 also by Plenum Press and contained the papers presented by a group of US and USSR scientists at the First US USSR Science Cooperation Seminar Optical Information Processing held at the US National Academy of Sciences in Washington D C from 16 to 20 June 1975 The seminar was followed by a series of visits to US scientific research laboratories and universities to which the visiting USSR scientists were escorted by Dr W E Kock and Dr G W Stroke The visits included Bell Laboratories IBM Thomas J Watson Research Laboratory and MIT as reported in detail in the FOREWORD of Volume I Volume II now presents the papers presented by another group of US and USSR scientists some having participated in the first seminar this series of papers was presented at the Second US USSR Science Cooperation Seminar on Optical Information Processing held at the USSR Academy of Sciences Siberian Branch Institute of Automation and Electrometry in the famous science city of Akademgorodok near Novosibirsk in Siberia USSR from 10 to 16 July 1976 *Optical and Electro-optical Information Processing* James T. Tippet, Lewis C. Clapp, 1965

Introduction to Information Optics Francis T.S. Yu, Suganda Jutamulia, Shizuhuo Yin, 2001-09-04 While there are books treating individual topics contained in this book this will be the first single volume providing a cohesive treatment on this subject as a whole This goes beyond optical communications in that it includes related topics such as sensing displays computing and data storage *The Physics of Optical Recording* Kurt Kurtovich Shvart[s], Kurt Schwartz, 1993-12-16 Optics and optical recording have a long history Already in the ancient temples of Egypt and in Stonehenge optical imaging was used in religious ceremonies As early as the 17th century optical instruments such as the telescope and the microscope played a crucial role in the development of the natural sciences which in turn altered humanity's perception of itself and the universe Nowadays the science of optics is not only a means of gathering information but also of information transfer analysis and processing Our reliance on optical computing has become crucial since 1982 when compact discs CD's first became widely available Optical memory discs CD ROM read only memory WORM write once read many and erasable read write discs are now produced industrially However WORM and erasable discs comprise only a small field of optical imaging and information processing Recent research into optical recording introduced new horizons for optical computing and real time information processing such as three dimensional holographic memory time domain holography nonlinear optical

filtering etc The development of these unique possibilities is conceivable only with new recording materials and novel recording processes For such progress one should be familiar with the pen and paper of optical recording the laser and the optical medium Thus this book will be a guide to novel applications of optical recording materials The reader will find a description of the principles of optical recording and optical processing which allow him to find novel applications for information storage and optical imaging

Optical Information Processing George W. Stroke, Winston E. Kock, National Science Foundation (U.S.), 1976-04 This volume contains the complete set of papers presented at the First U S U S S R Sciences Cooperation Seminar on Optical Information Processing held at the U S National Academy of Sciences in Washington D C from 16-20 June 1975 under the sponsorship of the National Science Foundation in cooperation with the U S S R Academy of Sciences The papers present the latest theoretical advances and experimental state of the art in the newly developing field of optical information processing with particular emphasis on applications to communication information storage and processing Digital as well as optical systems are discussed in terms of concepts and implementations Included are coherent and incoherent optical processing systems for images and signals materials and devices for optical computing acousto-optic signal processing memories optical digital and holographic optical logic and optically accessed digital stores non-linear optical processing as well as an analysis of the information capacity of optical processing systems and a report on new extensions of information processing in synthetic aperture radar Detailed configurations and new manufacturing techniques for several components are presented including such topics as asymmetric interference fringes in reflected light and kinoform optical elements of very high quality these are phase plates having a carefully controlled thickness somewhat comparable to the famous Schmidt plates and which could have an important role in many optical computer and communications systems

Optical Information, Data Processing and Storage, and Laser Communication Technologies, 2003
