Optical Polarization Of Molecules:

Optical Polarization of Molecules Marcis Auzinsh, Ruvin Ferber, 1995 The authors explain the theory and methods by which gas molecules can be polarized by light a subject of considerable importance for what it tells us about the electronic structure of molecules and properties of chemical reactions Starting with a brief review of molecular angular momentum the text then considers resonant absorption fluorescence photodissociation and photoionization as well as collisions and static fields Auzinsh and Ferber discuss a variety of macroscopic effects among them angular distribution and the polarization of emitted light ground state depopulation laser induced dichroism the effect of collisions external magnetic and electric field effects Most examples in the book are for diatomic molecules but symmetric top polyatomic molecules are also included The book concludes with a short appendix of essential formulae tables for vector calculus spherical functions Wigner rotation matrices Clebsch Gordon coefficients and methods for expansion over irreducible tensors The text will be useful to graduate students in physics and chemistry as well as researchers and theoreticians
