Resources Paul Zabel,Philipp Reiss,Angel Abbud-Madrid,Beth Lomax,Florian Kehl, Valentin T. Bickel,Hendrik Kolvenbach,Philip Arm ,Gabriela Ligeza,2024-11-18 Sustainable exploration of the solar system requires a large amount of material and propellant to be transported out of Earth s gravity well and onwards to their destination Despite recent advances in lowering launch costs transferring material from Earth to space is still very costly It still amounts to several thousand to tens of thousands of Euros per kilogram to low earth orbit and transportation to the Moon and Mars even a

multiple of that There is an abundance of resources in our solar system that can be utilized to reduce the material required to be launched from Earth significantly Among these resources are water ice hydrates metals regolith rare earth elements chemical compounds volatiles and rare isotopes Utilizing these space resources would enable e g consumable and propellant production in space manufacturing or the construction of large structures which would otherwise be very expensive or not possible at all with material launched from Earth Lunar regolith for example contains iron and titanium that could be used to produce spacecraft components or structural elements for a lunar base while oxygen released from oxide minerals could be used for respiration or as a propellant In addition water ice could be extracted from regolith and used for consumption or agricultural applications Although there have been numerous missions to the Moon there are still a lot of unknowns concerning its surface making it difficult to know where to look for resources and how to extract them

Prospecting for Planets (videorecording). Christine Zurbach Wiser,1991 Magnetism, Planetary Rotation, and Convection in the Solar System: Retrospect and Prospect W. O'Reilly,2012-12-06 On the 6th 7th and 8th April 1983 a conference entitled Magnetism planetary rotation and convection in the Solar System was held in the School of Physics at the University of Newcastle upon Tyne The purpose of the meeting was to celebrate the 60th birthday of Prof Stanley Keith Runcorn and his and his students and associates several decades of scientific achievement The social programme which consisted of excursions in Northumberland and Durham with visits to ancient castles and churches to Hexham Abbey and Durham Cathedral and dinners in Newcastle and Durham was greatly enjoyed by those attending the meeting and by their guests The success of the scientific programme can be judged by this special edition of Geophysical Surveys which is derived mainly from the papers given at the meeting The story starts in the late 1940s when the question of the origin of the magnetic field of the Earth and such other heavenly bodies as had at that time been discovered as having a magnetic field was exercising the minds of several scientists notably P M S Blackett at Manchester W M Elsasser at the University of Pennsylvania and E C Bullard at Cambridge Two alternative mechanisms were proposed In one the magnetic field was in some way connected with the distributed angular momentum of a rotating body in the other electric currents in conducting parts within the body were proposed as the source of magnetic field

Analogues for Planetary Exploration W. Brent Garry, Jacob E. Bleacher,2011 Where on Earth is it like Mars How were the Apollo astronauts trained to be geologists on the Moon Are volcanoes on Earth just like the ones on other planets The exploration of our solar system begins in our own backyard Discoveries on other planetary bodies cannot always be easily explained Therefore geologic sites on this planet are used to better understand the extraterrestrial worlds we explore with humans robots and satellites Analogues for Planetary Exploration is a compilation of historical accounts of astronaut geology training overviews of planetary geology research on Mars educational field trips to analog sites plus concepts for future human missions to the Moon This Special Paper provides a great overview of the science training and planning related to planetary exploration for students educators researchers and geology enthusiasts After all as

we learn about the solar system we can better understand our own planet Earth **The Plundered Planet** Paul Collier,2010-05-11 Paul Collier's *The Bottom Billion* was greeted as groundbreaking when it appeared in 2007 winning the Estoril Distinguished Book Prize the Arthur Ross Book Award and the Lionel Gelber Prize Now in *The Plundered Planet* Collier builds upon his renowned work on developing countries and the world's poorest populations to confront the global mismanagement of natural resources Proper stewardship of natural assets and liabilities is a matter of planetary urgency natural resources have the potential either to transform the poorest countries or to tear them apart while the carbon emissions and agricultural follies of the developed world could further impoverish them *The Plundered Planet* charts a course between unchecked profiteering on the one hand and environmental romanticism on the other to offer realistic and sustainable solutions to dauntingly complex issues Grounded in a belief in the power of informed citizens Collier proposes a series of international standards that would help poor countries rich in natural assets better manage those resources policy changes that would raise world food supply and a clear headed approach to climate change that acknowledges the benefits of industrialization while addressing the need for alternatives to carbon trading Revealing how all of these forces interconnect *The Plundered Planet* charts a way forward to avoid the mismanagement of the natural world that threatens our future

Gasselt,2017-11-28 This book provides an up to date interdisciplinary geoscience focused overview of solid solar system bodies and their evolution based on the comparative description of processes acting on them Planetary research today is a strongly multidisciplinary endeavor with efforts coming from engineering and natural sciences Key focal areas of study are the solid surfaces found in our Solar System Some have a direct interaction with the interplanetary medium and others have dynamic atmospheres In any of those cases the geological records of those surfaces and sub surfaces are key to

understanding the Solar System as a whole its evolution and the planetary perspective of our own planet This book has a modular structure and is divided into 4 sections comprising 15 chapters in total Each section builds upon the previous one but is also self standing The sections are Methods and tools Processes and Sources Integration and Geological Syntheses Frontiers The latter covers the far reaching broad topics of exobiology early life extreme environments and planetary resources all areas where major advancements are expected in the forthcoming decades and both key to human exploration of the Solar System The target readership includes advanced undergraduate students in geoscience related topics with no specific planetary science knowledge undergraduates in other natural science domains e g physics astronomy biology or chemistry graduates in engineering and space systems design who want to complement their knowledge in planetary science The authors backgrounds span a broad range of topics and disciplines rooted in Earth geoscience their expertise covers remote sensing and cartography field mapping impact cratering volcanology and tectonics sedimentology and stratigraphy exobiology and life in extreme environments planetary resources and mining Several generations of planetary scientists are cooperating to provide a modern view on a discipline developed from Earth during and through Space exploration
