Protecting Biological Diversity Roles And Responsibilities:

Protecting Biological Diversity Gilles Seutin, Catherine Jeanne Potvin, Margaret Kraenzel, 2001 The most species rich regions of the globe the tropics are economically the poorest How can biologists work toward effective protection for endangered species in countries hungry for food and basic resources And why should local people in those countries trust the advice of scientists from wealthier countries who have broken their promises in the past and have typically shown little respect for the cultural values of others *Protecting Biological Diversity: Roles and Responsibilities* Margaret; Seutin Kraenzel (Gilles; Potvin, Catherine), 2013

the most prominent In theory ABS turns biodiversity and genetic resources from an open access good to a private good and creates a market for genetic resources It internalizes the resources positive externalities by pricing the commercial values for research and development and makes users pay for it Users benefits are shared with the resource holders and set incentives for the sustainable use and the conservation of biodiversity Carmen Richerzhagen however finds that in practice there are significant questions about the effectiveness of the approach in the protection of biodiversity and about the fair and equitable sharing of benefits arising from the commercialization Utilizing the empirical findings of three case studies of biodiversity providing countries Costa Rica the Philippines and Ethiopia and one case study of a community of user countries the European Union EU Richerzhagen examines the effectiveness of ABS through the realization of its own objectives
