

JURASSIC PARK RAPTOR VS REAL RAPTORS

(based on the current scientific understanding)

CLEVER GIRL?

The movie portrays raptors as ultra intelligent killing machines.

Although intelligence in dinosaurs and raptors is often underappreciated, there is no evidence for *Deinonychus* and its possessing it to such high levels.

SIZE

In the movie raptors are tall enough to stare down Ned in the eye.

Deinonychus would have stood as tall as a short child and *Velociraptor* were a half size from height.

Since Jurassic Park was released, raptors of a similar size to the ones in it, the *Mutaborator* and *Archibator* have been described.

NAMING

The Jurassic Park raptors were based on the North American *Deinonychus*.

In the movie they are called *Velociraptors*, partly because of naming issues at the time, but mostly because it just sounds cooler.

HANDS

Movie raptors have downward facing talons.

The actual dinosaurs were not able to rotate their hands that way. Their hands faced each other in a "clapping" position.

FEET

The raptors in Jurassic Park walk on big padded feet.

Deinonychus and its relatives had more slender, bird-like feet.

FEATHERS

The movie features large white winged creatures, *Velociraptor*, *Deinonychus* and its were covered in feathers from head to tail.

TAILS

The movie raptors have deadly tails which they wiggle around. The real animals used their tails as a stiff counterbalance, holding it straight with vertical tendons.
