Richard Bailey

Ration Diet:

Tests of Hatchery Foods for Salmon, 1951 ,1952 *Nutrient Composition of Rations for Short-Term, High-Intensity Combat Operations* Institute of Medicine, Food and Nutrition Board, Committee on Military Nutrition Research, Committee on Optimization of Nutrient Composition of Military Rations for Short-Term, High-Stress Situations, 2006-01-09 Recognizing the importance of good nutrition for physical and mental status the Department of Defense asked the Institute of Medicine to guide the design of the nutritional composition of a ration for soldiers on short term high stress missions Nutrient Composition of Rations for Short Term High Intensity Combat Operations considers military performance health concerns food intake energy expenditure physical exercise and food technology issues The success of military operations depends to a large extent on the physical and mental status of the individuals involved Appropriate nutrition during assault missions is a continuous challenge mainly due to diminished appetites of individuals under stress Many less controllable and unpredictable factors such as individual preferences and climate come into play to reduce appetite In fact soldiers usually consume about half of the calories needed leaving them in a state called negative energy balance The consequences of being in negative energy balance while under these circumstances range from weight loss to fatigue to mental impairments An individual's physiological and nutritional status can markedly affect one's ability to maximize performance during missions and may compromise effectiveness With the number of these missions increasing the optimization of rations has become a high priority *Test of Different Components in the Abernathy Salmon Diet* Laurie G. Fowler, Joe L. Banks, 1967 Substitute components in the Abernathy salmon diet were tested in 2 years of feeding trials with fall chinook salmon fingerlings These diet tests indicated that turbot meal and dogfish meal were adequate substitutes for salmon meal Soybean oil was superior to peanut corn cottonseed or safflower oil Corn gluten safflower or soybean meals were inadequate substitutes for cottonseed meal Dried buttermilk was equal to dried skim milk The mixed diet could be stored under refrigeration for 3 days and the premixed meals could be held at room temperature for several weeks without observable deleterious effect on the fish storage for greater periods was deleterious **N.O.A.A. Technical Report NMFS SSRF ,1952** **Not Eating Enough** Committee on Military Nutrition Research, Institute of Medicine, 1995-09-15 Eating enough food to meet nutritional needs and maintain good health and good performance in all aspects of life both at home and on the job is important for all of us throughout our lives For military personnel however this presents a special challenge Although soldiers typically have a number of options for eating when stationed on a base in the field during missions their meals come in the form of operational rations Unfortunately military personnel in training and field operations often do not eat their rations in the amounts needed to ensure that they meet their energy and nutrient requirements and consequently lose weight and potentially risk loss of effectiveness both in physical and cognitive performance This book contains 20 chapters by military and nonmilitary scientists from such fields as food science food marketing and engineering nutrition physiology psychology

and various medical specialties Although described within a context of military tasks the committee s conclusions and recommendations have wide reaching implications for people who find that job related stress changes their eating habits
