Redesigning Teacher Education Alan R. Tom, 1997-01-01 Explores the shortcomings of teacher education and proposes design principles for rethinking teacher preparation Establishes a reform agenda for teacher education faculties Alan Tom is among the best at relating important issues in teacher education and a critical reading of the literature with his own professional experience This book is ambitious It lives up to the claim of examining political and institutional problems along with conceptual and intellectual ones This is something few teacher educators attempt and is a critical area to open up for sustained analysis Drawing upon events from his career as a teacher educator Alan R Tom candidly analyzes the predominant criticisms of teacher education and rejects the common tendency to infer the teacher education curriculum from such ideas as metaphors for teaching or knowledge He proposes eleven design principles to serve as a reform agenda including creating programs capable of self renewal having faculty model the desired image and skills of teaching and rethinking the sequence of practice and theory Each principle identifies a differing dimension for the conceptual and structural redesign of teacher preparation Four specific change strategies are evaluated as well task force top down piloting and family style The low status of teacher educators and the excessive regulation of teacher education are also examined as is the failure to give adequate attention to the administrative organization for teacher education

Redesigning American Education James Coleman, Barbara Schneider, Stephen Plank, Kathryn Schiller, Roger Shouse, Huayin Wang, 1999-02-19 Drawing on several principles of sociological theory James S Coleman and his colleagues construct a new design for American schooling The authors present compelling evidence on the deficits of our educational system compared to other countries arguing that the problems are the result of inappropriate incentives for teachers students and parents Asserting that most American school systems are driven by administrative needs the authors propose school designs that would shift the focus to student achievement output as the driving force behind public education The move from an administratively driven system to an output driven system would require the use of external standards a method of evaluating school and student performance gains over time a means of rewarding students teachers and parents for academic performance gains and the encouragement of informal norms that would support the new educational goals Basing their recommendations on two national longitudinal data sets each with a sample of over 1000 schools exhibiting

variations in organizational design the authors identify specific variations that have been shown to promote growth and achievement Education Reform Seymour B. Sarason, 2002 *The Politics of Education and the New Institutionalism* Robert L. Crowson, William Lowe Boyd, Hanne B. Mawhinney, 1996 This is an assessment of the reluctance of American education institutions to undergo change and reform at a time when it is considered necessary The lack of public confidence in educational institutions is discussed along with the subsequent consequences **Ecological Principles for Sustainable Education** Liza Ireland, 2024-01-29 This book explores how the education sector can transition to being truly sustainable and why necessary innovations for educational change are being subverted and undermined when mapped onto the existing industrial educational system Based on PhD case study research with schools that are modelling and teaching sustainability action research and the author's 40 years of working in the K 12 system this volume examines how education continues to perpetuate the status quo and why education innovations are thus undermined It shows the importance of redesigning education based on the principles of sustainable living systems and explores how this can be achieved across all levels of the educational system The first part of the book establishes a new vision of sustainable education whilst the second brings to light the industrial mechanistic root metaphors in current practice across leadership and administration buildings and grounds curriculum design teaching and learning that are subverting innovative efforts From understanding the foundational influential problematic root metaphors of our Industrial educational system it moves to explore how the ecological principles of sustainability can be used to rethink and redesign an educational system from its administration leadership and policy to curriculum buildings grounds and resources through to teaching and learning that will support sustainability innovation and creativity developing systems thinking and sustainability as a frame of mind Exploring how the education sector can transition to being truly sustainable and find new ways to traverse the problematic Industrial world view at this pivotal moment will appeal to administrators post secondary educators policymakers and researchers and scholars of sustainability education educational leadership curriculum design and educational philosophy **Designing Education for Tomorrow's Cities** Mario D. Fantini, Milton A. Young, Freda Douglas Bernotavicz, 1970 **The Finnish Education Mystery** Hannu Simola, 2014-11-20 Finnish education has been a focus of global interest since its first PISA success in 2001 After years of superficial celebration astonishment and educational tourism the focus has recently shifted to what is possibly the most interesting element of this Finnish success story that Finnish schools have been effectively applying methods that go against the flow of global education policy with no testing no inspection no hard evaluation no detailed national curriculum no accountability and no hard competition From a historical and sociological perspective the Finnish case is not merely a linear success story but is part of a controversial and paradoxical struggle towards Utopia towards egalitarian schooling Bringing together a collection of essays by Hannu Simola and his colleagues this book analyses the key dimensions of schooling in Finland to provide a critical analytical and uncompromising picture of the Finnish education system Going beyond the story

of success the book reveals the complexities of educational change but also identifies opportunities and alternatives for smart political action in complex and trans national societies Including a selection of key chapters on Finnish education policy and governance teacher education and classroom cultures the book will be of interest to researchers academics and postgraduate students in comparative education teacher education educational policy and educational reform
