ABSTRACT. Coral reefs are one of the world's most biologically diverse and productive ecosystems. However, these valuable resources are highly threatened by human activities. Satellite remotely sensed observations enhance our understanding of coral reefs and some of the threats facing them by providing global spatial and time-series data on reef habitats and the environmental conditions influencing them in near-real time. This review highlights many of the ways in which satellites are currently used to monitor coral reefs and their threats, and provides a look toward future needs and capabilities.

This false true-color image of Australia's Great Barrier Reef was acquired by the Multi-angle Imaging Spectro-Radiometer (MISR) instrument on August 26, 2000, and shows part of the southern portion of the reef adjacent to the central Queensland coast. The width of the MISR swath is approximately 380 km, with the reef clearly visible up to approximately 200 km from the coast. Image courtesy of NASA/GSFC/LARC/JP, MISR Team.

Reefs Of Space:

The Reefs of Space Frederik Pohl, Jack Williamson, 1964 **Deep Space Probes** Gregory L. Matloff, 2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun *Deep Space Probes* Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today's spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project *Deep-Space Probes* Gregory Matloff, 2000-10-31 This expert guide written by a major figure at the NASA Marshall Spaceflight Center presents an authoritative and comprehensive survey of the present day state of the art in the field of extrasolar and interstellar space exploration focusing on the most promising techniques It looks at potential missions and explores the many exciting ideas being developed to probe the planets and nearby stars for signs of life Because of the tremendous current interest in the search for extrasolar life and extraterrestrial intelligence this is a timely and illuminating survey *Living Space* Michael E. Veal, 2024-04-09 *Living Space* John Coltrane Miles Davis and Free Jazz from Analog to Digital fuses biography and style history in order to illuminate the music of two jazz icons while drawing on the discourses of photography and digital architecture to fashion musical insights that may not be available through the traditional language of jazz analysis The book follows the controversial trajectories of two jazz legends emerging from the 1959 album *Kind of Blue* Coltrane's odyssey through what became known as free jazz brought stylistic revolution and chaos in equal measure Davis's spearheading of jazz rock fusion opened a door through which jazz's ongoing dialogue with the popular tradition could be regenerated engaging both high and low ideas of creativity community and commerce Includes 42 illustrations **Reefs in Time and Space** Léo F. Laporte (ed.), 1974 **Corals in Space and Time** John Edward Norwood Veron, 1995 As concerns about the change in global climate and the loss of biodiversity have mounted attention has focused on the depletion of the ozone layer and the destruction of tropical rainforests But recently scientists have identified another seriously endangered ecosystem coral reefs In *Corals in Space and Time* J E N Veron provides a richly detailed study of corals that will inform investigations of these fragile ecosystems Drawing on twenty five years of research Veron brings together extensive field observations about the taxonomy biogeography paleontology and biology of corals After introducing coral taxonomy and biogeography as well as relevant aspects of coral biology for the non specialist he provides an interpretation of the fossil record and paleoclimates an analysis of modern coral distribution and a discussion of the evolutionary nature and origins of

coral species Revealing a sharp conflict between empirical observations about the geographical variation within species
 Veron introduces a non Darwinian theory of coral evolution He proposes that the evolution of coral species is driven not primarily by natural selection but by constantly shifting patterns of ocean circulation which produce changing variations of genetic connectivity This mechanism of speciation and hybridization has far reaching consequences for the study of all types of corals and potentially many other groups of organisms as well

The Rhetoric of Oil in the Twenty-First Century Heather Graves,David Edward Beard,2019-04-05 This book examines mass communication and civic participation in the age of oil analyzing the rhetorical and discursive ways that governments and corporations shape public opinion and public policy and

activists attempt to reframe public debates to resist corporate framing In the twenty first century oil has become a subject of civic deliberation Environmental concerns have intensified questions of indigenous rights have arisen and private and public investment in energy companies has become open to deliberation International contributors use local events as a starting point to explore larger issues associated with oil dependent societies and cultures This interdisciplinary collection synthesizes work in the energy humanities rhetorical studies and environmental studies to analyze the global discourse of oil from the start of the twentieth century into the era of transnational corporations of the 21st century This book will be a vital text for scholars in communication studies the energy humanities and in environmental studies Case studies are framed accessibly and the theoretical lenses are accessible across disciplines making it ideal for a post graduate and advanced undergraduate audience in these fields

Ocean Space Utilization '85 C.C. Mei, S. Motora, K. Okamura, J. Penzien, B.C. Jr. Gerwick, M. Homma, R. Lenschow, O.T. Magoon, 2012-12-06 Ocean development has conventionally been targeted at the exploitation of natural resources however this trend is gradually changing Ocean space has itself come to be regarded as a precious resource Since problems associated with energy food supply and population will become even more crucial over the coming years ocean space is being reevaluated as a means for providing solutions in many of these areas The future prosperity of mankind will to a large measure be dependent on the manner in which the resources of the oceans are utilized To develop ocean space effectively international cooperation is essential since a global perspective is paramount It is on this basis of cooperation and communication that the present symposium was organized bringing together experts from all over the world to report current findings in ocean development and to consider areas of future research The material covered here deals with all aspects of these areas which are now of such of vital importance

Microbial Carbonates in Space and Time: D.W.J. Bosence, K.A. Gibbons, D.P. Le Heron, W.A. Morgan, T. Pritchard, B.A. Vining, 2015-08-21 Microbial carbonates microbialites are remarkable sedimentary deposits because they have the longest geological range of any type of biogenic limestones they form in the greatest range of different sedimentary environments they oxygenated the Earth's atmosphere and they produce and store large volumes of hydrocarbons This Special Publication provides significant contributions at a pivotal time in our understanding of microbial carbonates when their economic importance has become established and the results of many research programmes are coming to fruition It is the first book to focus on the economic aspects of microbialites and in particular the giant pre salt discoveries offshore Brazil In addition it contains papers on the processes involved in formation of both modern and ancient microbialites and the diversity of style in microbial carbonate buildups structures and fabrics in both marine and non marine settings and throughout the geological record

Measuring the Oceans from Space Ian S. Robinson, 2004-06-30 This book covers the fundamental principles of measuring oceans from space and also contains state of the art developments in data analysis and interpretation and in sensors Completely new will be material covering advances in oceanography that have grown out of remote sensing including some of the global applications

of the data The variety of applications of remotely sensed data to ocean science has grown significantly and new areas of science are emerging to exploit the global datasets being recovered by satellites particularly in relation to climate and climate change basin scale air sea interaction processes e.g. El Niño and the modelling forecasting and prediction of the ocean

The Ecology of Fishes on Coral Reefs Peter F. Sale, 2013-10-22 This book provides a comprehensive and up to date review of the ecology of coral reef fishes presented by top researchers from North America and Australia Immense strides have been made over the past twenty years in our understanding of ecological systems in general and of reef fish ecology in particular Many of the methodologies that reef fish ecologists use in their studies will be useful to a wider audience of ecologists for the design of their ecological studies Significant among the impacts of the research on reef fish ecology are the development of nonequilibrium models of community organization more emphasis on the role of recruitment variability in structuring local assemblages the development and testing of evolutionary models of social organization and reproductive biology and new insights into predator prey and plant herbivore interactions

From Space to Place Roger Sayre, UNESCO, 2011-01-01 Textual photographic and satellite image information is provided for each site depicted in the atlas The details of a site's inscription into the World Heritage list are given along with a brief description by the cultural or natural values for which the site was inscribed The threats of the site are then described followed by a brief explanation what is discernible in the satellite imagery that was selected for each site The stories told in the satellite imagery provide numerous examples of the utility of satellite imagery analysis for World Heritage site management In certain cases the main threats that place a World Heritage site in danger are not identifiable in the satellite imagery In these cases we have selected imagery which provides an improvement in the general understanding of that site
