following findings a participants do not consider reflective practice to be a leadership priority b participants do not consider themselves to be effective as self reflective practitioners or in helping teachers to be reflective practitioners c participants do not use a variety of reflective practices d participants identified factors and conditions they perceive as necessary to increase their capacity to be reflective practitioners and e participants cite many barriers to using reflective practice Findings of this study support the research and literature on reflection and reflective practice as being critical to improving schools Study results may provide educators with insights into how reflective practice can improve leadership practices aimed at improving teaching and learning This study may also provide support for superintendents school committees policy makers and leadership development programs in giving deeper consideration and commitment for the use of reflective practice in leading the improvement of schools Abstract

Elementary School Teaching Gerard Jenner, Ms Sarah Chen watched as eight year old Marcus carefully arranged his desk supplies in perfect rows before beginning his math worksheet while across the room Emma bounced slightly in her chair as she whispered the multiplication facts to herself and Jordan stared out the window drawing invisible patterns in the air with his finger As a third grade teacher with five years of experience Sarah had learned that each of her twenty three students approached learning differently requiring her to understand not just what to teach but how children's minds develop and process information during these crucial elementary years Elementary school children typically ages five through eleven undergo remarkable cognitive social emotional and physical development that fundamentally shapes how they learn and interact with their environment Understanding these developmental stages is essential for elementary teachers who must create learning experiences that align with children's natural growth patterns while challenging them to reach their full potential The Swiss psychologist Jean Piaget's research revealed that elementary aged children transition from preoperational thinking characterized by concrete and literal understanding to concrete operational thinking where they begin to grasp logical relationships and conservation concepts but still struggle with abstract reasoning Cognitive development during the elementary years involves rapid growth in memory capacity attention span and processing speed that enables children to tackle increasingly complex academic tasks Working memory which allows children to hold and manipulate information mentally develops significantly between ages six and twelve explaining why first graders might struggle to remember multi step directions while fifth graders can handle more complex instructions Teachers who understand these cognitive limitations can structure lessons appropriately breaking complex tasks into manageable steps while providing visual supports and frequent checks for understanding
