Reproductive Laws for the 1990s Sherrill Cohen, Nadine Taub, 2013-12-01 The Project on Reproductive Laws for the 1990s began in 1985 with the realization that reports of scientific developments and new technologies were stimulating debates and discussions among bioethicists and policymakers and that women had little part

in those discussions either as participants or as a group with interests to be considered With the help of a planning grant from the Rutgers University Institute for Research on Women the Women s Rights Litigation Clinic at Rutgers University Law School Newark held a planning meeting that June attended by approximately 20 theorists and activists in the area of reproductive rights Project purposes methods and general shape took form at the meeting Two goals have characterized the Project s work since then first to generate discussion debate and where possible consensus among those committed to reproductive autonomy and gender equality as to how best to respond to the questions raised by re ported advances in reproductive and neonatal technology and new modes of reproduction and second to ensure that those shaping reproductive law and policy appreciate the ramifications of these developments for gender equality In meeting this twofold agenda the Project focused on six areas time limits on abortion prenatal screening fetus as patient reproductive hazards in the workplace interference with reproductive choice and alternative modes of reproduction The Project identified individuals to take responsibility for drafting model legislation and position papers in the six areas for the drafters see the Appendix

Standard of Care George J. Annas, 1997 American law not philosophy or medicine is the major force shaping American bioethics This is both because law at its best fosters individual rights equality and justice and because violation of the legal duty or standard of care a physician owes a patient can lead to a malpractice suit The law has therefore had two conflicting impacts on medical ethics the positive effect of eroding paternalism and replacing it with a patient centered ethic and the negative effect of encouraging physicians to be more concerned with avoiding litigation than doing the right thing Standard of Care explores the fundamental value conflicts confronting medicine and society by examining courtroom resolutions of real bioethical disputes often of constitutional dimension This case based approach which ranges from abortion to euthanasia from AIDS to organ transplantation from genetic research to the artificial heart and rationing illuminates the value choices with which the power and impotence of medicine confronts us George Annas urges health care professionals to go beyond the minimalist legal standard of care by promoting a vigorous patient centered medical ethics based on respect for human rights and responsibility to both patients and society If modern medicine is to enhance human life a reconceptualization of law as the beginning of ethical discourse rather than as an instrument to end it is essential Such a discourse could enrich all our lives by helping us to articulate both a national and international agenda for human rights in health

Safety and Ethics in Healthcare: A Guide to Getting it Right Bill Runciman, Alan Merry, Merylyn Walton, 2017-05-15 As more and more people survive into old age the burden of caring for them becomes greater and greater Although it is now possible to alleviate many of the afflictions that beset mankind no society can afford to pay for all the healthcare that is now available or technically possible People working in healthcare increasingly have to do more with less Rationing takes many forms mostly covert and the less privileged in most societies end up struggling to get their proper share of the available healthcare resources All too often those in the front line have to deal with the consequences of this rationing by default healthcare professionals find

themselves rushed off their feet simply doing the basic tasks and completing all the paperwork placing frail sick people in ever lengthening queues sometimes asking them to wait for hours in the middle of the night under uncomfortable and even unsafe conditions and worst of all working under conditions they would rather avoid in which the safety margin for those they are caring for has been greatly diminished We are all aware that under these conditions the chance of making a mistake which can seriously harm or even lead to the death of a patient is greatly increased But what can be done about this How can you be sure that you are doing the right thing when faced with having to practise an uncertain science on vulnerable patients in a complex system under ever changing conditions At what point could you cross the invisible line from reasonable to irresponsible or unethical behaviour by tolerating conditions or tacitly accepting practices which may be regarded as unacceptable even though you may have little immediate control over them This book is a guide to getting it right for healthcare professionals It is about doing the right thing in the right way at the right time for the right people These are the dimensions of quality in healthcare and although some are in conflict equitable access and efficiency for example adherence to ethical practice and professional behaviour will help lead healthcare practitioners through the minefield of responsibilities and priorities Real life situations are integral to the book with over 500 clinical examples referred to within the text
