First published in 1996 Routledge is an imprint of Taylor Francis an informa company **Rings and Radicals** Nathan J. Divinsky, 1965 **Rings and Radicals, by N. J. Divinsky** N. J. Divinsky, *Rings and Radicals* N. J. Divinsky, 1965
Algebras, Rings and Modules Michiel Hazewinkel, Nadiya Gubareni, V.V. Kirichenko, 2006-01-18
Associative rings and algebras are very interesting algebraic structures In a strict sense the theory of algebras in particular noncommutative algebras originated from a single example namely the quaternions created by Sir William R Hamilton in 1843 This was the first example of a noncommutative numbers system During the next forty years mathematicians introduced other examples of noncommutative algebras began to bring some order into them and to single out certain types of algebras for special attention Thus low dimensional algebras division algebras and commutative algebras were classified and characterized The first complete results in the structure theory of associative algebras over the real and complex fields were obtained by T Molien E Cartan and G Frobenius Modern ring theory began when J H Wedderburn proved his celebrated classification theorem for finite dimensional semisimple algebras over arbitrary fields Twenty years later E Artin proved a structure theorem for rings satisfying both the ascending and descending chain condition which generalized Wedderburn structure theorem The Wedderburn Artin theorem has since become a cornerstone of noncommutative ring theory The purpose of this book is to introduce the subject of the structure theory of associative rings This book is addressed to a reader who wishes to learn this topic from the beginning to research level We have tried to write a self contained book which is intended to be a modern textbook on the structure theory of associative rings and related structures and will be accessible for independent study *Rings, Modules and Radicals* Andor Kertész, 1973 *Radical Theory of Rings* J. W. Gardner, R. Wiegandt, 2019-09-27
Radical Theory of Rings distills the most noteworthy present day theoretical topics gives a unified account of the classical structure theorems for rings and deepens understanding of key aspects of ring theory via ring and radical constructions Assimilating radical theory's evolution in the decades since the last major work on rings and radicals was published the authors deal with some distinctive features of the radical theory of nonassociative rings associative rings with involution and near rings Written in clear algebraic terms by globally acknowledged authorities the presentation includes more than 500 landmark and up to date references providing direction for further research **Radical Theory of Rings** J.W. Theory of Radicals L. Márki, R. Wiegandt, 2014-05-21 Radicals arose originally from structural investigations in rings but later on they infiltrated into various branches of algebra as well as into topology and relational structures This volume is the result of a conference attended by mathematicians from all five continents and thus represents the current state of research in the area

The Theory of Near-Rings Robert Lockhart, 2021-11-14 This book offers an original account of the theory of near rings with a considerable amount of material which has not previously been available in book form some of it completely new The book begins with an introduction to the subject and goes on to consider the theory of near fields transformation near rings and near rings hosted by a group The bulk of the chapter on near fields has not previously been available in English The transformation near rings chapters considerably augment existing knowledge and the chapters on product hosting are essentially new Other chapters contain original material on new classes of near rings and non abelian group cohomology The Theory of Near Rings will be of interest to researchers in the subject and more broadly ring and representation theorists The presentation is elementary and self contained with the necessary background in group and ring theory available in standard references

Rings and Nearrings Mikhail Chebotar, Yuen Fong, Weng-Fong Ke, Pjek-Hwee Lee, 2011-12-22 This volume consists of seven papers related in various matters to the research work of Kostia Beidar a distinguished ring theorist and professor of National Ching Kung University NCKU Written by leading experts in these areas the papers also emphasize important applications to other fields of mathematics Most papers are based on talks that were presented at the memorial conference which was held in March 2005 at NCKU

Algebra Thomas W. Hungerford, 2003-02-14 Finally a self contained one volume graduate level algebra text that is readable by the average graduate student and flexible enough to accommodate a wide variety of instructors and course contents The guiding principle throughout is that the material should be presented as general as possible consistent with good pedagogy Therefore it stresses clarity rather than brevity and contains an extraordinarily large number of illustrative exercises

Recent Progress in Ring and Factorization Theory Matej Brešar, Alfred Geroldinger, Bruce Olberding, Daniel Smertnig, 2025-06-11 This proceedings volume gathers a selection of cutting edge research in both commutative and non commutative ring theory

and factorization theory The papers were presented at the Conference on Rings and Factorization held at the University of Graz Austria July 10-14 2023 The volume covers a wide range of topics including multiplicative ideal theory Dedekind Prfer Krull and Mori rings non commutative rings and algebras rings of integer valued polynomials topological aspects in ring theory factorization theory in rings and semigroups and direct sum decomposition of modules The conference also featured two special sessions dedicated to Matej Bre ar and Sophie Frisch on the occasion of their 60th birthdays This volume is aimed at graduate students and researchers in these areas as well as related fields and provides new insights into both classical and contemporary research in ring and factorization theory **Structure of Rings** Nathan Jacobson, 1956-12-31

Ring Constructions and Applications Andrei V. Kelarev, 2002 This book contains the definitions of several ring constructions used in various applications The concept of a groupoid graded ring includes many of these constructions as special cases and makes it possible to unify the exposition Recent research results on groupoid graded rings and more specialized constructions are presented In addition there is a chapter containing open problems currently considered in the literature Ring Constructions and Applications can serve as an excellent introduction for graduate students to many ring constructions as well as to essential basic concepts of group semigroup and ring theories used in proofs **A First Course in Noncommutative Rings** T.Y. Lam, 2012-12-06 One of my favorite graduate courses at Berkeley is Math 251 a one semester course in ring theory offered to second year level graduate students I taught this course in the Fall of 1983 and more recently in the Spring of 1990 both times focusing on the theory of noncommutative rings This book is an outgrowth of my lectures in these two courses and is intended for use by instructors and graduate students in a similar one semester course in basic ring theory Ring theory is a subject of central importance in algebra Historically some of the major discoveries in ring theory have helped shape the course of development of modern abstract algebra Today ring theory is a fertile meeting ground for group theory group rings representation theory modules functional analysis operator algebras Lie theory enveloping algebras algebraic geometry finitely generated algebras differential operators invariant theory arithmetic orders Brauer groups universal algebra varieties of rings and homological algebra cohomology of rings projective modules Grothendieck and higher K groups In view of these basic connections between ring theory and other branches of mathematics it is perhaps no exaggeration to say that a course in ring theory is an indispensable part of the education for any fledgling algebraist The purpose of my lectures was to give a general introduction to the theory of rings building on what the students have learned from a standard first year graduate course in abstract algebra
