Nanotechnology and Global Sustainability Donald Maclurcan, Natalia Radywyl, 2018-09-03 The rise of collaborative consumption peer to peer systems and not for profit social enterprise heralds the emergence of a new era of human collectivity Increasingly this consolidation stems from an understanding that big banner issues such as climate change are not the root causes of our present global predicament There is a growing and collective view that issues such as this are actually symptoms of a much more vicious seemingly insurmountable condition our addiction to economic consumption and population growth in a world of finite resources Nanotechnology and Global Sustainability uses nanotechnology the product of applied scientific knowledge to control and utilize matter at atomic and molecular scales as a lens through which to explore the interrelationship between innovation politics economy and sustainability This groundbreaking book addresses how stakeholders can actively reshape agendas to create positive and sustainable futures through this latest controversial cross sectoral technology It moves beyond issues of efficiency productivity and utility exploring the insights of 22 contributors from around the world whose work spans the disciplines of science and the humanities Their combined knowledge reinforced with various case studies introduces an exciting prospect how we can innovate without economic growth This new volume in the Perspectives in Nanotechnology series is edited by Dr Donald Maclurcan and Dr Natalia

Radywyl Dr Maclurcan is a social innovator and Honorary Research Fellow with the Institute for Nanoscale Technology at the University of Technology Sydney Australia Dr Radywyl is a social researcher and Honorary Research Fellow in the School of Culture and Communication at the University of Melbourne Australia She is also an Adjunct Research Fellow in the Faculty of Life and Social Sciences at Swinburne University of Technology Melbourne This book is written for a wide audience and will be of particular interest to activists scholars policy makers scientists business professionals and others who seek an understanding of how we might justly transition to sustainable societies *Energy and Culture* Brendan Dooley,2017-05-15

How will humanity continue to meet its energy needs without destroying the conditions necessary to sustain human life on earth The search for an answer to this question depends as much on the past as on the present and as much on the physical sciences as on the social sciences This book offers a truly trans disciplinary and trans cultural look at the problem of energy production and consumption in modern times Discussing issues of history politics science risk lifestyle and representation contributors demonstrate that experiences through time can provide insights into the kinds of solutions that have succeeded as well as reasons why other solutions have failed They also show what different countries and cultures might learn from each other emphasizing how discoveries in one discipline have inspired new approaches in another discipline Among many other important conclusions the book suggests that energy transitions do not occur simply because of the exhaustion of old energy sources and any solutions to the incipient energy crisis of the 21st century will depend on people s perceptions of science environment and risk informed and shaped in turn by the media **Encyclopedia of Sustainability** Robin Morris Collin,Robert William Collin,2009-12-09

experimental methods and public health that are pertinent to valuation Throughout the volume attention is paid to research and policy issues that arise not only in high income countries where most of the theory and econometrics that underlie applied valuation methods have been developed but also in poorer parts of the world The volume provides a state of the art reference for scholars and practitioners alike
