Risk Assessment in Conservation Biology M.A. Burgman,S. Ferson,H.R. Akçakaya,1993-01-31 This book is a cohesive guide to the available methods that can be used in population viability analysis It is therefore extremely valuable to both the practitioner of conservation biology and the theoretical population biologist *Theories in Ecological Risk Assessment* Masashi Kamo,2023-05-04 This book introduces various mathematical models used in ecological risk assessment primarily discussing models used in hazard assessment The book aims to link ecology and conservation biology with risk assessments bringing together the knowledge of ecotoxicology and ecology for effective risk assessment The first part describes population level assessment in ecological risk assessment The chapters cover current methodologies for ecological risk assessment individual level assessment population dynamics models for population level assessment case studies mathematical models for population extinctions the derivation of mean time to extinction MTE and their case studies The second part of the book discusses the mathematical models involved in hazard assessments It introduces the method of risk assessment using species sensitivity distributions SSDs hazard assessment of metals chemical mixtures using the Michaelis Menten equation basic elements of statistics and related topics Expected readers are risk assessors in governments and public sectors students and young researchers interested in environmental science The book is made accessible and easy to follow by beginners in mathematical biology and theoretical ecology **Ecological Risk Management** Hiroyuki Matsuda,2021-05-06 This book introduces the theory and practice of ecological risk management Using recent and live case studies in Japan the book explains the use of basic mathematical techniques in extinction risk adaptive population management avian collision risk in wind farms potential biological removal for marine mammals and ecological risk assessment of heavy metals The focus of this book is on case studies of nature conservation in Japan including internationally renowned topics of Japanese fisheries Shiretoko World Heritage Fukushima Daiichi Nuclear Power Plant accident It also covers the adaptive risk management of the new coronavirus disease The book comprises four parts covering ecotoxicology fisheries wildlife management and conservation and ecosystem based management It differs from other books in having its primary interest in human impacts on animals plant and ecosystems while existing works in this area concentrate on the fate of toxic substances in the environments and their effects on humans This book is unique in that it indicates various environmental issues that the theoretical ecology is potentially applicable without concentrating into any particular subject such as ecotoxicology or conservation biology Primary readers are undergraduate graduate students staffs of environmental consultant companies and environmental NPOs and journalists Readers will find this book useful for its abundant information on case studies of ecological risk management and consensus building in Japan **Population-Level Ecological Risk**

Assessment Lawrence W. Barnthouse, Wayne R. Munns Jr., Mary T. Sorensen, 2007-09-25 Most ecological risk assessments consider the risk to individual organisms or organism level attributes. From a management perspective, however, risks to population level attributes and processes are often more relevant. Despite many published calls for population risk assessment and the abundance of available scientific research and technical tool *Risk Analysis in Forest Management* Klaus von Gadow, 2013-06-29 Due to the long term planning horizons and the great variety of natural economic and operational hazards affecting forest ecosystems, uncertainty and multiple risk are typical aspects of forest management. Applications of risk analysis are surprisingly rare in spite of the rich assortment of sophisticated forest planning tools that are available today. The objective of this particular volume within the book series *Managing Forest Ecosystems* is to present state of the art research results, concepts and techniques regarding the assessment and evaluation of natural hazards and the analysis of risk and uncertainty relating to forest management. Various aspects of risk analysis are covered, including examples of specific modelling tools. The book is divided into three sections covering ecological perspectives, applications in engineering and planning, and methods applicable to economics and policy **Ecological Modeling in Risk Assessment** Robert A. Pastorok, Steven M. Bartell, Scott Ferson, Lev R. Ginzburg, 2016-04-19 Expanding the risk assessment toolbox, this book provides a comprehensive and practical evaluation of specific ecological models for potential use in risk assessment. *Ecological Modeling in Risk Assessment: Chemical Effects on Populations, Ecosystems, and Landscapes* goes beyond current risk assessment practices for toxic chemicals as applied to individual organism endpoints to describe ecological effects models useful at the population, ecosystem, and landscape levels. The authors demonstrate the utility of a set of ecological effects models eventually improving the ecological relevance of risk assessments and making data collection more cost effective Ecological Risk Assessment in the Federal Government, 1999 Encyclopedia of Biodiversity, 2013-02-05 The 7 volume *Encyclopedia of Biodiversity* Second Edition maintains the reputation of the highly regarded original, presenting the most current information available in this globally crucial area of research and study. It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it. Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity, ecological patterns and theories of biodiversity, and an assessment of contemporary patterns and trends in biodiversity. The science of biodiversity has become the science of our future. It is an interdisciplinary field spanning areas of both physical and life sciences. Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future. Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes. The editors of this edition are all well respected, instantly recognizable academics operating at the top of their respective fields in biodiversity research. Readers can be assured that they are reading material that has been meticulously checked and reviewed by experts. Approximately 1 800 figures and 350

tables complement the text and more than 3 000 glossary entries explain key terms

Handbook of Environmental Risk Assessment and Management Peter P. Calow, 2009-07-08 At the heart of environmental protection is risk assessment the likelihood of pollution from accidents the likelihood of problems from normal and abnormal operation of industrial processes the likely impacts associated with new synthetic chemicals and so on Currently risk assessment has been very much in the news the risks from BSE and E coli and the public perception of risks from nuclear waste etc This new publication explains how scientific methodologies are used to assess risk from human activities and the resultant objects and wastes on people and the environment Understanding such risks supplies crucial information to frame legislation manage major habitats businesses and industries and create development programmes Unique in combining the science of risk assessment with the development of management strategies Covers science and social science politics economics psychology aspects Very timely risk assessment lies at the heart of decision making in various topical environmental questions BSE Brent Spar nuclear waste

Population-Level Ecological Risk Assessment Lawrence W. Barnthouse, Jr. Munns, Mary T. Sorensen, 2019-12-02 Most ecological risk assessments consider the risk to individual organisms or organism level attributes From a management perspective however risks to population level attributes and processes are often more relevant Despite many published calls for population risk assessment and the abundance of available scientific research and technical tools assessing risks to populations risk assessors worldwide still have difficulty determining how population level considerations can be integrated into environmental decision making Population Level Ecological Risk Assessment establishes a framework for goals methods and data needs for different assessment applications and for integrating population level risk assessment into risk management decisions Beginning with a summary of legal regulatory business and other contexts the book presents population level ecological risk assessment as an internationally recognized science based tool and offers specific recommendations for using this tool to support environmental management decisions It gives clear explicit operational population assessment definitions and explains the relevance of density dependence genetics and spatial considerations as well as applicable lessons from conservation biology and natural resource management The authors provide a tool box of empirical and modeling methods and describe the general approaches assumptions data requirements strengths and limitations of each method They establish a working foundation for designing and conducting population level ecological risk assessments consistent with North American European and Japanese risk management approaches The book concludes by highlighting key considerations needed to improve the scientific quality and interpretation of assessments Detailed appendices include examples of population level assessment approaches applicable to specific environmental management contexts a modeling case study and a supplemental r

Demographic Toxicity H. Resit Akcakaya, John D. Stark, Todd S. Bridges, 2008-04-25 This edited volume collects population and metapopulation models for a wide variety of species focusing on the use of models in population level risk assessment for toxins Each chapter of Demographic Toxicity describes the

application of a population model to one species with the aim of demonstrating how various life history characteristics of the species are incorporated into the model how ecotoxicological impacts are modeled and how the results of the model has been or can be used in risk assessment The model in each chapter is implemented in RAMAS software which uses matrix modeling of population dynamics RAMAS software is believed to be the most powerful tool ever invented for this task Demographic Toxicity includes a CD that contains a demo version of the program and the data files for each species The book explains how to use these specific tools for modeling analysis and interpretation of data Demographic Toxicity provides a major review of current knowledge on population dynamics in different species representing both terrestrial and aquatic environments

Risk Assessment as a Tool for Water Resources Decision-Making in Central Asia Christopher M. Teaf, Bulat K. Yessekin, Mikhail Kh. Khankhasayev, 2012-12-06 Water resources both in terms of water quality and water quantity are of critical importance in planning for sustainable development in Central Asia and the Caucasus as well as in other parts of the world This NATO Advanced Research Workshop ARW entitled Risk Assessment as a Tool for Water Resources Decision Making in Central Asia was conducted on September 23 25 2002 in Almaty Kazakhstan The ARW addressed methods and approaches by which risk assessment methodology that has been developed in the United States Europe and elsewhere can be applied to environmental and water resource problems in Central Asia The stated goals of the ARW were to assess the existing state of knowledge in the context of potential applications of risk assessment tools to water resources and other environmental issues in Central Asia to identify research gaps and directions for future research in the area of water resources which may be addressed through the application of risk assessment tools to promote closer working relationships between the scientists and technical experts from Central Asia and the Caucasus as well as the scientists and technical experts from the United States and Europe Based on historical experiences of Central Asian scientists and their colleagues in other parts of the world there is a demonstrated need in the region to provide education training and technical assistance on environmental decision making tools including risk assessment

Environmental Risk Assessment and Management from a Landscape Perspective Lawrence A. Kapustka, Wayne G. Landis, 2010-07-15 An important guide to assessing and managing the environment from a landscape perspective Ecological relationships are nested within the landscape Identifying the relevant spatial and temporal scales is critical for an effective understanding of ecological functions that human societies depend upon Moreover human encroachment into natural areas or changes in climate can alter spatial relationships which in turn can negatively affect vital plant and wildlife patterns and weaken economic structures needed to sustain human societies This book is the first to combine multiple disciplines into one cohesive strategy to study these crucial connections and looks toward building a social paradigm that embraces the dynamics of ecological systems This book Integrates landscape ecology environmental risk assessment valuation of ecological goods and services and environmental management decision processes into one single source Includes chapters on quantitative measures Bayesian modeling economic analysis

and sustainable landscapes Covers marine forest agricultural and pharmaceutical risk assessment Has a chapter on predicting climate change risk to ecosystems Has a companion ftp site with color graphics animations and risk assessment tools With material that is accessible across all knowledge levels Environmental Risk Assessment and Management from a Landscape Perspective moves beyond looking solely at chemical contaminants to diagnose environmental threats and aims to accomplish practical risk assessment in a manner that supports long term sustainable management

Biological Invasions in Marine Ecosystems Gil Rilov, Jeffrey A.

Crooks, 2008-11-19 Biological invasions are considered to be one of the greatest threats to the integrity of most ecosystems on earth. This volume explores the current state of marine bioinvasions which have been growing at an exponential rate over recent decades. Focusing on the ecological aspects of biological invasions, it elucidates the different stages of an invasion process starting with uptake and transport through inoculation, establishment, and finally integration into new ecosystems. Basic ecological concepts, all in the context of bioinvasions, are covered such as propagule pressure, species interactions, phenotypic plasticity, and the importance of biodiversity. The authors approach bioinvasions as hazards to the integrity of natural communities but also as a tool for better understanding fundamental ecological processes. Important aspects of managing marine bioinvasions are also discussed, as are many informative case studies from around the world.
