Indoor Air Quality: From Sampling to Risk Assessment in the Light of New Legislations Pasquale Avino, Gaetano Settimo, 2021

This Special Issue aims to make a concrete technical contribution to the solution of the various problems related to indoor air pollution. In 11 papers, international scientists report the last findings in this field from different points of view, including topics such as the IAQ legislation, the role of IAQ in schools, hospitals, and micro environments in general, the performance of an olfactometer system, or the impact of an indoor malodor. BTEX measures in a Fire Station and a chemical characterization of e-cigarette e-cig refill liquids. It seems appropriate to encourage the development of reference values or specific action values in order to better manage particularly problematic situations in these environments. In the absence of national references to be used for a comparison, it is possible to use those reported in the legislation of other European countries or by ad hoc working groups or by analogy to use other standards such as those relating to ambient air.

Indoor Air Quality M. Maroni, B. Seifert, T. Lindvall, 1995-08-16

People spend most of their time indoors, and indoor air pollutants can cause both long and short-term health effects.

Awareness of indoor air pollution as an environmental issue, however, is relatively new. This book has been prepared to offer an up-to-date comprehensive reference manual on indoor air quality to scientists and professionals active in this area. The intention of the book is to bring together a collection of contributions from specialists in the specific disciplines of indoor air quality, covering all points of view from various angles, from building design and building sciences to health effects and medical diagnosis, toxicology of indoor air pollutants, and air sampling and analysis. One of the characteristics of this book is the multidisciplinary approach that integrates the expertise of medical doctors, architects, engineers, chemists, biologists, physicists, and toxicologists. The resulting product is of great educational value and recommended for consultation as well as teaching purposes. The panel of contributing authors includes top experts on indoor air worldwide who have participated in international workshops and led the development of indoor air sciences over the recent years.

Management of Indoor Air Quality Marzenna R. Dudzinska, 2011-06-07

Due to changes in lifestyle, people spend more time indoors. This refers not only to the time spent at home and at office premises but also in shopping malls, recreation centers, and transport vehicles. Concentrations of many pollutants are higher indoors than they are outdoors. Consequently, the indoor environment has a bigger impact on human health, well-being, and effectiveness. Indoor Environment Engineering is a relatively new scientific discipline with an interdisciplinary character, using knowledge from chemistry, biology, medicine, and engineering. Since the early 1990s, the number of studies in this area has grown significantly, from research on indoor air parameters, new emerging pollutants, indoor air energy-saving systems, heating, to studies on ventilation and air conditioning in buildings. Even though much progress has been made since then, a number of questions still remain open: How can indoor air quality be measured? What are reliable, time- and cost-efficient methods? How can indoor air quality be improved, investing as little energy as possible? How to minimize secondary pollution caused by air supply systems? Which type of pollutants should research focus

on In what way are we exposed to new pollutants plasticizers flame retardants pesticides What is their impact on our health Management of Indoor Air Quality is a collection of 14 peer reviewed papers in Indoor Environment Engineering addressing the above issues It includes research on HVAC impact on aerosol levels new ventilation systems as well as air quality problems in new environments The volume is intended for scientists engineers post graduate and graduate students interested in the area of indoor environment Indoor Air Quality Hermann Fromme,2023-10-28 This book presents a comprehensive and detailed overview of indoor pollution covering the main contaminants in the indoor environment air and dust the health aspects of exposure and different possibilities for a risk assessment The book outlines the chemical substances and physical and biological factors that occur more frequently indoors which are of health significance or for which only limited information on their occurrence indoors is available to date It also provides guidance to identify where problems may arise in the future and where data is missing for a valid exposure and risk assessment as well as for consequent risk management Written by a highly recognized and experienced medical expert in the field the book starts with an introduction to the indoor environment including topics such as indoor environmental quality and health indoor climate sampling of indoor pollutants and measures to improve indoor air quality The author then delves into the fundamentals of exposure assessment and special exposure indoor situations followed by in depth coverage of the health aspects and indoor air occurrence of several substances such as volatile organic compounds very volatile organic compounds semi volatile organic compounds and particulate matters and fibers Particular attention is given to bioaerosols like mold microbial volatile organic compounds mycotoxins and viruses Readers will also find chapters devoted to the main health aspects and indoor occurrence of inorganic gases radon and metals and smoking The book closes with a chapter on risk assessment in which readers will learn more about the basics of risk assessment key points and processes of a health evaluation and guidance for assessing indoor air contamination This book is a unique compilation of the current worldwide exposure situation in private and public indoor spaces and an important reference for researchers that are willing to assess the rising burden of disease and potential causes behind degraded indoor air quality Scientists students and policymakers interested in the fields of medicine and environmental sciences will understand the appeal of this book **Risk Assessment and Indoor Air Quality** Harlee Knight,2023-09-26 Indoor air quality IAQ refers to the quality of air inside a school house office or any other building environment Poor IAQ has been associated with decreased productivity sick building syndrome and poor learning in schools Nausea sinus congestion shortness of breath headache and other symptoms are associated with poor IAQ Indoor air pollution can cause a variety of health problems including heart diseases cancer respiratory diseases and cognitive deficits Risk assessment with respect to the IAQ involves the application of the tools and methodologies of risk assessment to the study of indoor air quality The goal of an IAQ risk assessment is to detect problems with air quality in facility areas and develop long term solutions to improve the safety and health of building occupants It involves collecting samples from air and from

building surfaces studying the airflow and determining the human exposure to pollutants The main techniques for enhancing IAQ in the buildings include using air filters eliminating or controlling the source of pollution and using ventilation to dilute pollutants This book contains some path breaking studies on indoor air quality and its risk assessment It will help the readers in keeping pace with the rapid changes in this field of study **Introduction to Indoor Air Quality**, 1991 **Federal Register**, 2008-05-20 **Indoor Air Quality** Dikaia E. Saraga, 2020-12-07 The monitoring of indoor air pollutants in a spatio temporal basis is challenging A key element is the access to local i e indoor residential workplace or public building exposure measurements Unfortunately the high cost and complexity of most current air pollutant monitors result in a lack of detailed spatial and temporal resolution As a result individuals in vulnerable groups children pregnant elderly and sick people have little insight into their personal exposure levels This becomes significant in cases of hyper local variations and short term pollution events such as instant indoor activity e g cooking smoking and dust resuspension Advances in sensor miniaturization have encouraged the development of small inexpensive devices capable of estimating pollutant concentrations This new class of sensors presents new possibilities for indoor exposure monitoring This Special Issue invites research in the areas of the triptych indoor air pollution monitoring indoor air modeling and exposure to indoor air pollution Topics of interest for the Special Issue include but are not limited to the following low cost sensors for indoor air monitoring indoor particulate matter and volatile organic compounds ozone terpene chemistry biological agents indoors source apportionment exposure assessment health effects of indoor air pollutants occupant perception climate change impacts on indoor air quality [Indoor Air Quality Assessment for Smart Environments](#) J. Saini, M. Dutta, G. Marques, 2022-05-18 Indoor air quality IAQ and indoor air pollution IAP are a matter of concern in many countries because they can significantly influence the general health and well being of those who spend most of their time inside whether at home or work Poor IAQ and repeated exposure to dangerous concentrations of pollutants can contribute significantly to the healthcare burden along with increased absenteeism and lost productivity worldwide This book [Indoor Air Quality Assessment for Smart Environments](#) explores the problem of IAQ and highlights potential challenges gaps and opportunities in the field As the title suggests it focuses on assessing IAQ in smart environments using emerging technologies such as the Internet of Things IoT and Wireless Sensor Networks WSN that can further contribute to the development of intelligent building management systems The book contains 8 chapters written by various experts in the field and addressing significant elements of IAQ management including definition state of the art and applications sensing techniques technological interventions and smart environments smart monitoring devices green and smart hospitals health risks of nano building products the optimization of household ventilation and an assessment of smart environments While providing a useful source of knowledge for researchers policymakers public health professionals and government agencies wishing to enhance the air quality in buildings the book will also serve as a guide to building occupants who wish to take the necessary measures to enhance the

built environment with improved ventilation arrangements

Sick Building Syndrome Sabah A. Abdul-Wahab, 2011-05-03 This volume throws light on the Sick Building Syndrome in Libraries and other public buildings and the extent to which it is influenced by the internal environment of libraries One of the signs of this disease is that the person suffers from a set of symptoms closely related to his her presence in the building without the identification of any clear causes and his her relief of these symptoms when he she are out of the building Hence the book sheds on the extent to which the interior environment impacts upon the health of the people and the extent to which this is reflected in their performance The book can be used for teaching research and professional reference It concludes with the recommendation that is essential to observe environmental dimensions when designing library and public buildings taking into consideration the expected impact of SBS in library and public buildings on people The significance of the book derives from the fact that it is

the first of its kind to examine the issue of the interior environment and SBS of library and public building worldwide
