Kovacich, 2013-04-17 When you first hear the term Information Assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it In truth this is the Holy Grail that all organisations that value their information should strive to achieve but which few even understand Information Assurance is a term that has recently come into common use When talking with old timers in IT or at least those that are over 35 years old you will hear them talking about information security a term that has survived since the birth of the computer In the more recent past the term Information Warfare was coined to describe the measures that need to be taken to defend and attack information This term however has military connotations after all warfare is normally their domain Shortly after the term came into regular use it was applied to a variety of situations encapsulated by Winn Schwartau as the three classes of Information Warfare Class 1 Personal Information Warfare Class 2 Corporate Information Warfare Class 3 Global Information Warfare Political sensitivities lead to warfare being replaced by operations a much more politically correct word Unfortunately operations also has an offensive connotation and is still the terminology of the military and governments **Handbook of Research on Ubiquitous Computing Technology for Real Time Enterprises** Mühlhäuser, Max, Gurevych, Iryna, 2008-01-31 This book combines the fundamental methods algorithms and concepts of pervasive computing with current innovations and solutions to emerging challenges It systemically covers such topics as network and application scalability wireless network connectivity adaptability and context aware computing information technology security and liability and human computer interaction Provided by publisher *Optical and Wireless Communications* Matthew N.O. Sadiku, 2018-10-08 Optical and wireless technologies are being introduced into the global communications infrastructure at an astonishing pace Both are revolutionizing the industry and will undoubtedly dominate its future yet in the crowded curricula in most electrical engineering programs there is no room in typical data communications courses for proper coverage of these next generation technologies Optical and Wireless Communications Next Generation Networks covers both types of networks in a unique presentation designed for a one semester course for senior undergraduate or graduate engineering students Part I Optical Networks covers optical fibers transmitters receivers multiplexers amplifiers and specific networks including FDDI SONET fiber channel and wavelength routed networks Part II Wireless Networks examines fundamental concepts and specific wireless networks such as LAN ATM wireless local loop and wireless PBXs This section also explores cellular technologies and satellite communications Eventually next generation networks will be as ubiquitous as traditional telephone networks and today's engineering students must be prepared to meet the challenges of optical and wireless systems development and deployment Filled with illustrations examples and end of chapter problems Optical and Wireless Communications Next Generation Networks

provides a brief but comprehensive introduction to these technologies that will help future engineers build the foundation they need for success
