Scientific Directory and Annual Bibliography National Institutes of Health (U.S.),1984 Each issue lists papers published during the preceding year Modeling Complexity In Economic And Social Systems Frank Schweitzer,2002-12-09 Economics and the social sciences are in fact the hard sciences as Herbert Simon argued because the complexity of the

problems dealt with cannot simply be reduced to analytically solvable models or decomposed into separate subprocesses. Nevertheless in recent years the emerging interdisciplinary sciences of complexity have provided new methods and tools for tackling these problems ranging from complex data analysis to sophisticated computer simulations. In particular advanced methods developed in the natural sciences have recently also been applied to social and economic problems. The twenty one chapters of this book reflect this modern development from various modeling perspectives such as agent based models, evolutionary game theory, reinforcement learning and neural network techniques, time series analysis, non equilibrium macroscopic dynamics and for a broad range of socio economic applications, market dynamics, technological evolution, spatial dynamics and economic growth, decision processes and agent societies. They jointly demonstrate a shift of perspective in economics and the social sciences that is allowing a new outlook in this field to emerge.
