Genetic Disorders, Syndromology and Prenatal Diagnosis T.V.N. Persaud, 2012-12-06 Birth defects have assumed an importance even greater now than in the past because infant mortality rates attributed to congenital anomalies have declined far less than those for other causes of death such as infectious and nutritional diseases As many as 50 % of all pregnancies terminate as miscarriages and in the majority of cases this is the result of faulty intrauterine development Major congenital malformations are present in at least 2 % of all liveborn infants and 22 % of all stillbirths and infant deaths are associated with severe congenital anomalies Not surprisingly there has been a great proliferation of research into the problems of developmental abnormalities over the past few decades This series *Advances in the Study of Birth Defects* was conceived in order to provide a comprehensive focal source of up to date information for physi cians concerned with the health of the unborn child and for research workers in the fields of fetal medicine and birth defects The first four volumes featured recent experimental work on selected areas of high priority and intensive investigation including mechanisms of teratogenesis teratological evaluation molecular and cellular aspects of abnormal development and neural and behavioural teratology It seems logical and timely that the clinical aspects should now be presented Accordingly leading experts were invited to review a broad range of common problems from the standpoint of embryology aetiology clinical manifestations diagnosis and management This volume deals with genetic disorders and prenatal diagnosis

The Genetics of Aging Edward Schneider, 2013-11-11 The Genetics of Aging is divided into several sections in an attempt to provide a logical progression from the level of the genome to the realm of human genetics The relationship between the genetic material and aging will be thoroughly explored in the initial chapters These chapters discuss in depth the various theories that have been proposed for the mechanisms of aging at the molecular level and present data which either support or contradict these hypotheses Subsequent chapters will deal with the genetics of aging in organisms ranging from paramecium to mammals The largest section of this volume will be devoted to several important areas in human genetics human genetic disorders which feature premature aging the effect of human parental aging on the production of genetically abnor mal offspring the genetics of human longevity and a review of studies on aging human twins Over the last few decades genetic technology has provided enormous insight into a number of disciplines Therefore in the last few chapters several genetic approaches to the study of aging are discussed somatic cell genetics immunogenetics and behavioral genetics As the goal of this volume is to present a comprehensive examination of the genetics of aging most chapters are oriented toward general review of their respective areas It is my hope that this volume will encourage clinical biological and behavioral investigators to turn their attention to the genetic aspects of aging as well as to employ genetic technology to obtain further insight into aging processes
