Positive Impact Forestry A Sustainable Approach To Managing Woodlands:

Positive Impact Forestry Thomas J. McEvoy, 2012-06-22 Positive Impact Forestry is a primer for private woodland owners and their managers on managing their land and forests to protect both ecological and economic vitality. Moving beyond the concept of low impact forestry, Thom McEvoy brings together the latest scientific understanding and insights to describe an approach to managing forests that meets the needs of landowners while at the same time maintaining the integrity of forest ecosystems. Positive impact forestry emphasizes forestry's potential to achieve sustainable benefits both now and into the future with long term investment superseding short term gain and the needs of families especially future generations exceeding those of individuals. Thom McEvoy offers a thorough discussion of silvicultural basics synthesizing and explaining the current state of forestry science on topics such as forest soils, tree roots, form and function in trees and the effects of different harvesting methods on trees, soil organisms and sites. He also offers invaluable advice on financial, legal and management issues ranging from finding the right forestry professionals to managing for products other than timber to passing forest lands and management legacies on to future generations. Positive Impact Forestry helps readers understand the impacts of deliberate human activities on forests and offers viable strategies that provide benefits without damaging ecosystems. It speaks directly to private forest owners and their advisers and represents an innovative guide for anyone concerned with protecting forest ecosystems, timber production, land management and the long term health of forests. Named the Best Forestry Book for 2004 by the National Woodlands Owners Association.

Explorations into Sustainable Development with Forest and Biodiversity Conservation Dr. Ritu Dhir, 2023-06-02 Forests being the lungs of planet Earth are the most important ecosystems. They act as carbon sinks and sustain a huge amount of carbon in them. They play an extremely important role for the survival of the living beings on this earth. From human beings to the flora and fauna of the earth's ecosystem depend on the forests in some way or the other. Forests are the repositories of enormous biodiversity on this planet. They are an abode to millions of species of animals including human beings, plants and microorganisms. They also give massive ecosystem services to mankind and to all the living beings thriving on this earth. They regulate climate, water cycles and carbon sequestering on this planet. They even provide a livelihood to human beings all over the world. They check global warming on this earth. The parameter of sustainable development is that forest and biodiversity is conserved for the coming generations also. Forests are the most important repositories of terrestrial biological diversity. The diversity of life amongst the living beings and their distinct habitats, the interactions between the various components of the biodiversity makes this planet a habitable place for various life forms. Forest conservation is extremely important for intergenerational equity and the principle of sustainable development paves the way. The forests especially in the domains of forestry and agriculture provide 40% of the world's economy. This is due to the biological diversity in the forest ecosystems. 70% of the world's poor populace who live in rural areas is directly dependent on biodiversity for their livelihood. A rough estimate of 60

million indigenous folks are somehow reliant on forests for their daily needs The Supreme Court of India in Rural Litigation and Entitlement Kendra v State of Uttar Pradesh elucidated the importance of ecosystem services as provided by the forests

Forestry and Environmental Change John L. Innes, Gordon M. Hickey, Hans Fredrik Hoen, 2005-01-01 This book which contains 14 chapters considers the interactions between forestry and environmental climatic change from social and economic perspectives Topics discussed include deforestation in temperate and tropical forests the application of forest zoning as an alternative to multiple use forestry capital management establishment of large scale reserves in temperate and boreal forests and social revolutions in forest management This book will be of significant interest to those studying forestry climate change and natural resource economics

Sustainable Forest Management Julio J. Diez, Beatriz Martín-García, 2012-04-11 The concept of forest sustainability dates from centuries ago although the understanding of sustainable forest management SFM as an instrument that harmonizes ecological and socio economic concerns is relatively new The change in perspective occurred at the beginning of the 1990s in response to an increased awareness of the deterioration of the environment in particular of the alarming loss of forest resources The book collects original case studies from 12 different countries in four continents Africa America Asia and Europe These studies represent a wide variation of experiences from developing and developed countries and should clarify the current status of SFM worldwide and the problems associated with its implementation
