## **Sea Change In Liner Shipping Regulation And Managerial Decision Making In A Global Industry:**

**Sea Change in Liner Shipping** Mary R. Brooks, 2000 Examines the changing regulatory climate for the liner shipping industry and explores managerial thinking about co operation and competition within the industry This book develops guiding principles for a common regulatory policy for liner shipping while proposing a framework for shipping managers to guide strategy formulation and implementation **Federal Statutory Exemptions from Antitrust Law**, 2007

**Handbook of International Trade and Transportation** Bruce A. Blonigen, Wesley W. Wilson, 2018-01-26 International trade has grown rapidly over the past half century accommodated by the transportation industry through concomitant growth and technological change But while the connection between transport and trade flows is clear the academic literature often looks at these two issues separately This Handbook is unique in pulling together the key insights of each field while highlighting what we know about their intersection and ideas for future research in this relatively unexamined but growing area of study *Maritime Logistics Value in Knowledge Management* Eon-Seong Lee, Dong-Wook Song, 2014-08-21

Knowledge management has been widely applied to various industries as a good strategy to help improve firms performance As globalisation accelerates and international trade increases more and more maritime transport operations have become one of the vitalest industries to receive large attention from international managers This is because the managers have perceived that the maritime transport system is an integrated entity within the global logistics and supply chain and it should be therefore managed in the most efficient and effective ways possible as an organic body within a global logistics system Taking this approach this book examines how maritime transport operators such as shipping companies port terminal operators and freight forwarders could successfully play a role within the global logistics flow wherein they are embedded by improving their logistic value i e maritime logistics value As per the objective the current book suggests a knowledge management based solution It attempts to systematically investigate what types of knowledge are needed in the maritime logistics industry how maritime operators could effectively acquire the knowledge and whether the acquired knowledge would help maritime operators enhance maritime logistics value This book provides not only comprehensive understandings of knowledge management strategy but also its practical application to the maritime logistics industry This would therefore be a useful guidebook for the managers academics and undergraduate postgraduate students in the field of maritime transport and global logistics to help them to gain comprehensive knowledge of the application of knowledge management strategy to the industry Liner Conferences in Competition Law Hongyan Liu, 2009-09-24 A liner conference as a self

regulation organisational form of liner shipping companies constitutes a typical hard core cartel with significant anti competitive effect One of the main three trade routes of liner shipping traffic is the Europe Asia Trade on the two ends of which both the European Community EC and the People s Republic of China PRC play important roles in the international liner shipping market However the competition regimes on liner conferences in both jurisdictions are not equivalent From a

comparative point of view this book reviews the historical development of maritime policy and regulatory legislation in the EC and the PRC catches insight into the system of regulation regime and individual provisions in substantive and procedural meaning and finally provides a wide ranging perspective on the future competition regulation in respect of the latest developments in both jurisdictions Seas and Waterways of the World John Zumerchik, Steven L. Danver, 2009-11-12 This is the first comprehensive encyclopedia on the history of the vast and varied ways human beings have used the world's waterways for business protection and recreation Seas and Waterways of the World An Encyclopedia of History Uses and Issues offers a comprehensive introduction to humanity's historical reliance on the world's seas and waterways and how that reliance continues to evolve Over the course of two volumes this extraordinary resource describes the world's major nautical features the wide variety of uses for those waterways and a number of essential issues arising from water borne commerce The encyclopedia marks the emergence of the aquarium cruise energy fishing insurance mining trade transportation recreation and sport industries and includes entries on harbors ports and coastal development that play a part in the economics of commercial water use Also included is coverage of a number of significant themes such as the rise and fall of the Erie Canal as the gateway to the Midwest and the declining popularity of the Panama Canal The Liberalization of Maritime Transport Services Benjamin Parameswaran, 2012-12-06 Despite multiple efforts on the bilateral regional and multilateral level to create uniform or at least harmonized rules for commercial operations and practices in the maritime transport sector and to liberalize maritime transport services by tearing down the barriers that exist in that sector there is until today no global regime regulating or rather deregulating the supply of maritime transport services and ensuring open markets In this situation private economic actors are confronted with substantial legal uncertainty This book provides a detailed analysis of the history of maritime transport services in the Uruguay and post Uruguay Round negotiations and the role of the sector in the ongoing Doha Round talks where Member States have the opportunity to work towards a global regime ensuring the progressive liberalization of the sector The reader will be confronted with an extensive overview of the role of maritime transport services in the WTO GATS framework a topic basically uncovered in the literature so far

**Maritime Transport Services in the Law of the Sea and the World Trade Organization** Chuyang Liu, 2009 Since the beginnings of international law the law of the sea has been of paramount importance for international trade Yet this area of law and international trade regulations have developed as two distinct areas with little interface with each other As the GATT WTO emerged in parallel to the LOS Convention since the 1970s both bodies have made extensive efforts in international treaty making However the relationship between trade regulations and the law of the sea has hardly been explored The author examines some key aspects of this relationship in particular port entry access to cargo in coastal shipping cabotage and access to cargo in international shipping The inclusion of services in WTO law will render this relationship of great importance in the future as the agreement extensively covers maritime transport It is just a matter of

time until the current exclusion of maritime transport under special exemptions will be reviewed in future negotiations The book provides the background and a normative basis for approaching some of the problems which members of the WTO will have to address in coming years It also deals briefly with the problem of choice of law and competing jurisdictions between trade law and maritime law
