Seapower As Strategy Navies And National Interests:

Seapower as Strategy Norman Friedman, 2001 A noted defense analyst and naval weapons expert lays out the roles of navies and naval strategy in the twenty first century Drawing upon historical examples Norman Friedman first explains how and why naval strategy differs from other kinds of military strategy and then provides a sense of the special flavor of a maritime or naval approach to national security problems The various uses of navies are described and illustrated by extended case studies covering the last quarter millennium Friedman presents these observations in the context of U S post Cold War security concerns and concepts He explains how and why the United States currently espouses a maritime strategy and argues that navies are likely to regain a dominant position due to changes both in their own technology and in air and ground forces He urges countries with the appropriate geographical and economic advantages namely the United States the United Kingdom Japan and Australia to use their inherent maritime leverage Rare among books on naval strategy this work combines an examination of the vital role of coalition partners especially those with significant ground forces with a comprehensive survey of relevant technology and the way that strategy can be reflected in the design of an evolving fleet The author is known for his ability to explain modern technology to lay audiences and his book is suitable for all those interested in public policy questions as well as national security professionals and students of strategy The book s publication at a time of potential change in U S national strategy only reinforces its value as a document worthy of study *Seapower* Geoffrey Till, 2004 At the beginning of the 21st century much has remained the same in naval terms but much has changed Geoffrey Till s study is an exploration of how change will impact upon the world s navies *Twenty-First Century Seapower* Peter Dutton, Robert Ross, Øystein Tunsjø, 2013-05-02 This book offers an assessment of the naval policies of emerging naval powers and the implications for maritime security relations and the global maritime order Since the end of the Cold War China Japan India and Russia have begun to challenge the status quo with the acquisition of advanced naval capabilities The emergence of rising naval powers is a cause for concern as the potential for great power instability is exacerbated by the multiple maritime territorial disputes among new and established naval powers This work explores the underlying sources of maritime ambition through an analysis of various historical cases of naval expansionism It analyses both the sources and dynamics of international naval competition and looks at the ways in which maritime stability and the widespread benefits of international commerce and maritime resource extraction can be sustained through the twenty first century This book will be of much interest to students of naval power Asian security and politics strategic studies security studies and IR in general

Security Studies in a New Era of Maritime Competition Jonathan D. Caverley, Peter Dombrowski, 2023-06-06 How do two conventionally powerful nuclear armed but commercially oriented great powers reliant on sea lanes and global maritime infrastructure engage in a long term strategic rivalry When do such competitions lead to crisis instability and even war This book presents a research agenda using a variety of methods to explore this unique competitive environment for China and

the United States The most likely great power friction points today are located at sea Any shots fired between China and the United States will likely be between navies and air forces rather than armies While much security studies understandably concentrates on land forces basic concepts such as the importance of territory the offense defense balance technological competition economic warfare and crisis stability do not comfortably apply to maritime competition The chapters in this volume consider the use of naval power including blockades naval diplomacy fleet engagements and nuclear escalation across the spectrum of global politics and international conflict The volume encourages applying the many classic approaches of security studies to this high stakes relationship while considering maritime conflict as distinct from other forms such as land and nuclear that have traditionally occupied the field This work will be of great interest to students of strategic studies international relations maritime security and Asian American politics The chapters in this book were originally published as a special issue of Security Studies

Architects of Continental Seapower Jeremy Stocker, 2020-10-01 This book describes and analyses two iconic figures in twentieth century naval history the German Admiral Alfred von Tirpitz and the Russian Admiral Sergei Gorshkov It examines the men what they thought and wrote about seapower the fleets they created and the strategic consequences of what they did More broadly it draws on the respective histories of the post 1897 Imperial German Navy and the post 1956 Soviet Navy to examine the continental bid for large scale seapower The work argues that both individuals built navies that did not and could not fulfil the objectives for which they were created Drawing on the legacies of both men the book also develops some wider ideas about the creation of large navies by continental states with cautionary lessons for today s emerging powers India and China Both admirals have received book length biographies but this is the first attempt at a comparative study and the first to draw broader strategic lessons from their respective attempts as continental navalists to challenge maritime states This book will be of much interest to students of naval history strategic studies and International Relations
