Search For An Alternative:

Spatial Search Gunther Maier, 2012-12-06 Two areas have fascinated me for a long time One is the micro economic theory of consumer behavior the other one the role of space in economic processes Usually the two don't go together very well In more advanced versions of microeconomic consumer theory its economic actor may face uncertainty have to allocate resources over time or have to take into account the characteristics of products but rarely deals with space He/she inhabits a spaceless point economy Regional Science on the other hand describes and analyzes the spatial structure and development of the economy but either ignores individual decision making altogether or treats it in a rather simplistic way In this book I try to bring together these two areas of interest of mine I do this by use of the microeconomic concept of search and placing it in an explicit spatial context The result in my opinion is a theoretical concept with fascinating implications a broad set of potential implications and numerous interesting research questions After reading this book where I layout the basic idea of spatial search describe its elements and discuss some of its implications I hope the reader will share this opinion There are still plenty of unanswered research questions in this part of economic theory Hopefully this book will stimulate more work along these lines *Handbook of Game Theory and Industrial Organization, Volume II* Luis C.
