Assessment of Mars Science and Mission Priorities

National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary and Lunar Exploration, 2003-08-08 Within the Office of Space Science of the National Aeronautics and Space Administration NASA special importance is attached to exploration of the planet Mars because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made The failures in 1999 of two NASA missions Mars Climate Orbiter and Mars Polar Lander caused the space agency s program of Mars exploration to be systematically rethought both technologically and scientifically A new Mars Exploration Program plan summarized in Appendix A was announced in October 2000 The Committee on Planetary and Lunar Exploration COMPLEX a standing committee of the Space Studies Board of the National Research Council was asked to examine the scientific content of this new program This goals of this report are the following Review the state of knowledge of the planet Mars with special emphasis on findings of the most recent Mars missions and related research activities Review the most important Mars research opportunities in the immediate future Review scientific priorities for the exploration of Mars identified by COMPLEX and other scientific advisory groups and their motivation and consider the degree to which recent discoveries suggest a reordering of priorities and Assess the congruence between NASA s evolving Mars Exploration Program plan and these recommended priorities and suggest any adjustments that might be warranted

An Astrobiology Strategy for the Search for Life in the Universe National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Astrobiology Science Strategy for the Search for Life in the Universe, 2019-04-20 Astrobiology is the study of the origin evolution distribution and future of life in the universe It is an inherently interdisciplinary field that encompasses astronomy biology geology heliophysics and planetary science including

complementary laboratory activities and field studies conducted in a wide range of terrestrial environments Combining inherent scientific interest and public appeal the search for life in the solar system and beyond provides a scientific rationale for many current and future activities carried out by the National Aeronautics and Science Administration NASA and other national and international agencies and organizations Requested by NASA this study offers a science strategy for astrobiology that outlines key scientific questions identifies the most promising research in the field and indicates the extent to which the mission priorities in existing decadal surveys address the search for life s origin evolution distribution and future in the universe This report makes recommendations for advancing the research obtaining the measurements and realizing NASA s goal to search for signs of life in the universe *Space, Time, and Aliens* Steven J. Dick, 2020-05-11 In this comprehensive and interdisciplinary volume former NASA Chief Historian Steven Dick reflects on the exploration of space astrobiology and its implications cosmic evolution astronomical institutions discovering and classifying the cosmos and the philosophy of astronomy The unifying theme of the book is the connection between cosmos and culture or what Carl Sagan many years ago called the cosmic connection As both an astronomer and historian of science Dr Dick has been both a witness to and a participant in many of the astronomical events of the last half century This collection of papers presents his reflections over the last forty years in a way accessible to historians philosophers and scientists alike From the search for alien life to ongoing space exploration efforts readers will find this volume full of engaging topics relevant to science society and our collective future on planet Earth and beyond **Evolution of Bioenergetics from Elements to Life** David F. Stowe, 2025-01-08 This book begins with the creation of the elements used in life and how these elements as atoms bound together into organic compounds and polymerized into lipids peptides and nucleotides The text stresses the role and importance of the elements C H O N P S the univalent and multivalent ions and the requirement of liquid water to foster prebiotic life Expert author Dr David Stowe explains the role of early molecular interactions in developing the first living prokaryote bacteria and their eventual engulfment as organelles to make eukaryotes that allowed their sophistication into specialized cells and large multicellular organisms The book uniquely traces the genesis of bioenergetics and uses cardiac cell mitochondria as an evolutionary example for modern bioenergetic function This book is geared toward graduate students post doctoral fellows and other academics interested in evolutionary biochemistry with an emphasis on the early development of bioenergetics leading to modern high energy mitochondria *Encyclopedia of Global Change* Andrew S. Goudie, 2002 Mapping the relationship between human society and the Earth the Encyclopedia of Global Change is the first general reference guide to the impact of politics population economics and technology on the planet Containing over 300 original signed articles by distinguished scholars it is the comprehensive work for this multi discipline high profile field The Encyclopedia synthesizes current knowledge on natural and human made changes in the Earth s physical chemical and biological systems and the effects of these changes on society Areas such as altered ecosystems climate change food supply

water production and consumption population and the political impact of global change are covered in detail And the clearly written articles also include responses to global modification agreements and associations institutions policies biographies and case studies Enhanced by 1 500 illustrations extensive cross references bibliographies and an index the Encyclopedia of Global Change links essential knowledge across many fields geography geology geophysics atmospheric science political science economics technology and others in a resource that is both accessible and authoritative The jargon free language makes it an excellent work for the professional scholar as well as the interested general reader
