Abdessalaam,Miguel Clüsener-Godt,Bilquees Gul,2014-05-12 Sustainable development is the key for the survival in 21st century The natural resources are finite and cannot be used with impunity because we are the custodian of these resources and have responsibility to pass these to the next generation This monumental task requires several major commitments and most important of them is to arrest population explosion which has already reached seven billion Natural resources like air to breath food to eat and water to drink and fossil fuel to maintain this life style are being overexploited Unrestrained consuming culture will accelerate undesired situation This situation will have more dire consequences in resource limited ecosystems like dry lands Given the severe scarcity of water ever increasing population and soil salinization out of the box solutions for the provision of food and clean energy is required to spare meager fresh water resources for conventional agriculture This volume contains a number of articles dealing with halophyte ecology bio geography ecophysiology hyper saline soils biofuels biosaline agriculture biosaline landscaping climate change mitigation and biodiversity It also contains the communication of innovative ideas such as the research into floating mangroves seagrass terraces as well as a World Halophyte Garden containing all known salt tolerant plant species It is hoped that the information provided will not only advance vegetation science but that it will truly generate more interdisciplinarity networking awareness and inspire farmers and agricultural and landscaping stakeholders to seriously engage in halophyte cash crop production in coastal hyper saline areas **Principles of Sonar Performance Modelling** Michael Ainslie,2010-09-14 Sonar performance modelling SPM is

concerned with the prediction of quantitative measures of sonar performance such as probability of detection It is a multi disciplinary subject requiring knowledge and expertise in the disparate fields of underwater acoustics acoustical oceanography sonar signal processing and statistical detection theory No books have been published on this subject however since the 3rd edition of Urlick s classic work 25 years ago and so Dr Ainslie s book will fill a much needed gap in the market Currently up to date information can only be found in different forms and often with conflicting information in various journals conference and textbook publications Dr Michael Ainslie is eminently qualified to write this unique book He has

worked on sonar performance modeling problems since 1983 He has written many peer reviewed research articles and conference papers related to sonar performance modeling making contributions in the fields of sound propagation and detection theory
