Databases Theory and Applications Tong Chen, Yang Cao, Quoc Viet Hung Nguyen, Thanh Tam Nguyen, 2024-12-12
This LNCS volume constitutes the referred proceedings of 35th Australasian Database Conference ADC 2024 held in Gold Coast QLD Australia and Tokyo Japan during December 16 18 2024 The 38 full papers included in these proceedings were carefully reviewed and selected from 90 submissions They focus on latest advancements and innovative applications in database systems data driven applications and data analytics *Journal of Biblical Literature*, 1897 *The Politics of Climate Change* Paul G. Harris, 2013-09-13 Climate change is now a mainstream part of the international political agenda It has become clear that it is not solely a technical issue to be resolved by scientists but a political issue with political implications at all levels of global governance Indeed some may argue that few long term problems in international affairs are more important than this one The purpose of this book is to reveal and apply some of the latest thinking on the implications of climate change for international affairs and to explore how various proposals for tackling climate change will affect interstate relations in coming years Chapters by scholars of international relations international political economy and international law contribute to current discussions of climate change doing so in way that is accessible to students stakeholders government officials and informed laypersons Some questions considered in the book include the following How has the discussion of climate change affected interstate relations How does this problem and how do environmental issues more generally challenge international relations theory How do international climate politics influence domestic politics and vice versa How would climate change or action taken to tackle it affect the balance of power or balance of influence Is climate change a matter of international security or international justice or both and how does the answer to this question affect policy responses of governments Which states are likely to benefit or suffer from the various proposals to address climate change What are the legal ethical and political implications of the uneven distribution of the impacts of climate change This book was previously published as a special issue of the Cambridge Review of International Affairs *Extreme Events* Mario Chavez, Michael Ghil, Jaime Urrutia-Fucugauchi, 2015-12-21 The monograph covers the fundamentals and the consequences of extreme geophysical phenomena like asteroid impacts climatic change earthquakes tsunamis hurricanes landslides volcanic eruptions flooding and space weather This monograph also addresses their associated local and worldwide socio economic impacts The understanding and modeling of these phenomena is critical to the development of timely worldwide strategies for the prediction of natural and anthropogenic extreme events in order to mitigate their adverse consequences This monograph is unique in as much as it is dedicated to recent theoretical numerical and empirical developments that aim to improve i the understanding modeling and prediction of extreme events in the geosciences and ii the quantitative evaluation of their economic consequences The emphasis is on coupled integrative assessment of the physical phenomena and their socio economic impacts With its overarching theme Extreme Events Observations Modeling

and Economics will be relevant to and become an important tool for researchers and practitioners in the fields of hazard and risk analysis in general as well as to those with a special interest in climate change atmospheric and oceanic sciences seismo tectonics hydrology and space weather

Measuring and Managing Operational Risk Paola Leone,Pasqualina Porretta,Mario Vellella,2017-12-26 This book covers Operational Risk Management ORM in the current context and its new role in the risk management field The concept of operational risk is subject to a wide discussion also in the field of ORM s literature which has increased throughout the years By analyzing different methodologies that try to integrate qualitative and quantitative data or different measurement approaches the authors explore the methodological framework the assumptions statistical tool and the main results of an operational risk model projected by intermediaries A guide for academics and students the book also discusses the avenue of mitigation acts suggested by the main results of the methodologies applied The book will appeal to students academics and financial supervisory and regulatory authorities

Applied Extreme Value Statistics Arvid Naess,2024-06-13 This book does not focus solely on asymptotic extreme value distributions In addition to the traditional asymptotic methods it introduces a data driven computer based method which provides insights into the exact extreme value distribution inherent in the data and which avoids asymptotics It therefore differs from currently available texts on extreme value statistics in one very important aspect The method described provides a unique tool for diagnostics and for efficient and accurate extreme value prediction based on measured or simulated data It also has straightforward extensions to multivariate extreme value distributions The first half provides an introduction to extreme value statistics with an emphasis on applications It includes chapters on classical asymptotic theories and threshold exceedance models with many illustrative examples The mathematical level is elementary and to increase readability detailed mathematical proofs have been avoided in favour of heuristic arguments The second half presents in some detail specialized topics that illustrate the power and the limitations of the concepts discussed With diverse applications to science engineering and finance the techniques described in this book will be useful to readers from many different backgrounds

Comprehensive Semiconductor Science and Technology ,2011-01-28 Semiconductors are at the heart of modern living Almost everything we do be it work travel communication or entertainment all depend on some feature of semiconductor technology Comprehensive Semiconductor Science and Technology Six Volume Set captures the breadth of this important field and presents it in a single source to the large audience who study make and exploit semiconductors Previous attempts at this achievement have been abbreviated and have omitted important topics Written and Edited by a truly international team of experts this work delivers an objective yet cohesive global review of the semiconductor world The work is divided into three sections The first section is concerned with the fundamental physics of semiconductors showing how the electronic features and the lattice dynamics change drastically

when systems vary from bulk to a low dimensional structure and further to a nanometer size Throughout this section there is an emphasis on the full understanding of the underlying physics The second section deals largely with the transformation of the conceptual framework of solid state physics into devices and systems which require the growth of extremely high purity nearly defect free bulk and epitaxial materials The last section is devoted to exploitation of the knowledge described in the previous sections to highlight the spectrum of devices we see all around us Provides a comprehensive global picture of the semiconductor world Each of the work s three sections presents a complete description of one aspect of the whole Written and Edited by a truly international team of experts

Computational Auditory Scene Analysis David F. Rosenthal, Hiroshi G. Okuno, Hiroshi Okuno, David Rosenthal, 2021-01-31 The interest of AI in problems related to understanding sounds has a rich history dating back to the ARPA Speech Understanding Project in the 1970s While a great deal has been learned from this and subsequent speech understanding research the goal of building systems that can understand general acoustic signals continuous speech and or non speech sounds from unconstrained environments is still unrealized Instead there are now systems that understand clean speech well in relatively noiseless laboratory environments but that break down in more realistic noisier environments As seen in the cocktail party effect humans and other mammals have the ability to selectively attend to sound from a particular source even when it is mixed with other sounds Computers also need to be able to decide which parts of a mixed acoustic signal are relevant to a particular purpose which part should be interpreted as speech and which should be interpreted as a door closing an air conditioner humming or another person interrupting Observations such as these have led a number of researchers to conclude that research on speech understanding and on nonspeech understanding need to be united within a more general framework Researchers have also begun trying to understand computational auditory frameworks as parts of larger perception systems whose purpose is to

give a computer integrated information about the real world Inspiration for this work ranges from research on how different sensors can be integrated to models of how humans auditory apparatus works in concert with vision proprioception etc Representing some of the most advanced work on computers understanding speech this collection of papers covers the work being done to integrate speech and nonspeech understanding in computer systems *Hedge Fund Modelling and Analysis using MATLAB* Paul Darbyshire,David Hampton,2014-03-27 The second book in Darbyshire and Hampton s Hedge Fund Modelling and Analysis series Hedge Fund Modelling and Analysis Using MATLAB takes advantage of the huge library of built in functions and suite of financial and analytic packages available to MATLAB This allows for a more detailed analysis of some of the more computationally intensive and advanced topics such as hedge fund classification performance measurement and mean variance optimisation Darbyshire and Hampton s first book in the series Hedge Fund Modelling and Analysis Using Excel and VBA is seen as a valuable supplementary text to this book Starting with an overview of the hedge fund industry the book then looks at a variety of commercially available hedge fund data sources After covering key statistical techniques and methods the book discusses mean variance optimisation hedge fund classification and performance with an emphasis on risk adjusted return metrics Finally common hedge fund market risk management techniques such as traditional Value at Risk methods modified extensions and expected shortfall are covered The book s dedicated website www.darbyshirehampton.com provides free downloads of all the data and MATLAB source code as well as other useful resources Hedge Fund Modelling and Analysis Using MATLAB serves as a definitive introductory guide to hedge fund modelling and analysis and will provide investors industry practitioners and students alike with a useful range of tools and techniques for analysing and estimating alpha and beta sources of return performing manager ranking and market risk management **Information Networking: Wired Communications and Management** Ilyoung Chong,2003-08-01 The papers comprising Vol I and Vol II were prepared for and presented at the International Conference on Information Networking 2002 ICOIN 2002 which was held from January 30 to February 1 2002 at Cheju Island Korea It was organized by the KISS Korean Information Science Society SIGIN in Korea IPSJ SIG DPE Distributed Processing Systems in Japan the ITRI Industrial Technology Research Institute and National Taiwan University in Taiwan The papers were selected through two steps refereeing and presentation review We selected for the theme of the conference the motto One World of Information Networking We did this because we believe that networking will transform the world into one zone in spite of different ages countries and societies Networking is in the main stream of everyday life and affects directly millions of people around the world We are in an era of tremendous excitement for professionals working in many aspects of the converging networking information retailing entertainment and publishing companies Ubiquitous communication and computing technologies are changing the world Online communities e commerce e service and distance learning are a few of the consequences of these technologies and advanced networking will develop new applications and technologies with global impact The goal is the creation of a world wide distributed computing system that
