Photonic Switching II Kunio Tada, H. Scott Hinton, 2012-12-06 The 1990 International Topical Meeting on Photonic Switching was held April 12-14 1990 in Kobe Japan in conjunction with the 1990 International Meeting on Optical Computing It was

sponsored by the Institute of Electronics Information and Communication Engineers in cooperation with the IEEE Lasers and Electro Optics Society the Optical Society of America and the Japan Society of Applied Physics The attendance was in excess of 340 persons with 18 countries represented a testimony to the current international interest in photonic switching This book contains expanded and more detailed versions of most of the papers presented at the topical meeting With the success of optical fibers there is an increased demand for a switching system that can operate directly on the light present in the fibers The goal is to reduce the total number of optical to electrical and electrical to optical transformations as far as possible in addition to exploiting the large spectral and temporal bandwidth offered by such an optically transparent system

Photonic Interconnects for Computing Systems Gabriela Nicolescu, Mahdi Nikdast, Sébastien Le Beux, 2022-09-01 In recent years there has been a considerable amount of effort both in industry and academia focusing on the design implementation performance analysis evaluation and prediction of silicon photonic interconnects for inter and intra chip communication paving the way for the design and dimensioning of the next and future generation of high performance computing systems Photonic Interconnects for Computing Systems provides a comprehensive overview of the current state of the art technology and research achievements in employing silicon photonics for interconnection networks and high performance computing summarizing main opportunities and some challenges The majority of the chapters were collected from presentations made at the International Workshop on Optical Photonic Interconnects for Computing Systems OPTICS held over the past two years The workshop invites internationally recognized speakers on the range of topics relevant to silicon photonics and computing systems Technical topics discussed in the book include Design and Implementation of Chip Scale Photonic Interconnects Developing Design Automation Solutions for Chip Scale Photonic Interconnects Design Space Exploration in Chip Scale Photonic Interconnects Thermal Analysis and Modeling in Photonic Interconnects Design for Reliability Fabrication Non Uniformity in Photonic Interconnects Photonic Interconnects for Computing Systems presents a compilation of outstanding contributions from leading research groups in the field It presents a comprehensive overview of the design advantages challenges and requirements of photonic interconnects for computing systems The selected contributions present important discussions and approaches related to the design and development of novel photonic interconnect architectures as well as various design solutions to improve the performance of such systems while considering different challenges The book is ideal for personnel in computer photonic industries as well as academic staff and master graduate students in computer science and engineering electronic engineering electrical engineering and photonics

On-Chip Photonic Interconnects Christopher J. Nitta, Matthew Farrens, Venkatesh Akella, 2022-06-01 As the number of cores on a chip continues to climb architects will need to address both bandwidth and power consumption issues related to the interconnection network Electrical interconnects are not likely to scale well to a large number of processors for energy efficiency reasons and the problem is compounded by the fact that there is a fixed total power budget for a die dictated by

the amount of heat that can be dissipated without special and expensive cooling and packaging techniques. Thus there is a need to seek alternatives to electrical signaling for on-chip interconnection applications. Photonics, which has a fundamentally different mechanism of signal propagation, offers the potential to not only overcome the drawbacks of electrical signaling but also enable the architect to build energy-efficient scalable systems. The purpose of this book is to introduce computer architects to the possibilities and challenges of working with photons and designing on-chip photonic interconnection networks.
