Dyker, S. Radosevic, 2012-12-06 This book uses a range of S T and structural indicators to analyse the transformation process in particular the transformation of science technology and industry in the former communist countries The book originates from a sense of the tremendous need for quantitative indicators for assessing trends and performance in the post socialist economies S T systems in the region have passed through the first phase of rapid deterioration or as it is called by some analysts implosion After ten years of transformation we are witnessing a process of increasing differentiation of these countries in terms of general patterns of growth and structural change as well as specific lines of restructuring in their S T systems The question of sources of growth or indeed of stagnation is an increasingly urgent one from both the policy and academic perspectives In that context there is a pressing need for in depth assessment of restructuring patterns in science technology and industry in the region as a basis for understanding how restructuring in S T is linked to industrial restructuring and to general economic and social transformation As the contributions to this volume show there is now a critical mass of quantitative data across the post socialist countries which deserves to be studied more thoroughly in a comparative manner The changes of the last ten years have produced varying patterns of adjustment which are now clearly visible in S T and structural indicators **University Curricula in the Marine Sciences and Related Fields** United States.
