Geometric Integration Theory on Supermanifolds T. Voronov, 1991 The author presents the first detailed and original account of his theory of forms on supermanifolds a correct and non trivial analogue of Cartan de Rham theory based on new concepts The paper develops the apparatus of supermanifold differential topology necessary for the integration theory A key feature is the identification of a class of proper morphisms intimately connected with Berezin integration which are of fundamental importance in various problems The work also contains a condensed introduction to superanalysis and supermanifolds free from algebraic formalism which sets out afresh such challenging problems as the Berezin integral on a bounded domain **Multidimensional Strange Attractors and Turbulence** I. S. Aranson, Mikhail Izrailevich Rabinovich, M. I. Rabinovich, V. S. Afraimovich, 1989 The authors explore the origin of multidimensional strange attractors and their role in describing turbulence It includes an analytical estimation of the dimensions of strange attractors for models described by differential difference equations and discusses the conditions in which space homogeneous chaos is stable with respect to random perturbations in flow systems **Universal Scenarios of Transitions to Chaos Via Homoclinic Bifurcations** D. V. Lyubimov, A. S. Pikovsky, M. A. Zaks, 1989 *X-Ray Diffraction Study of Nematic Smectic A and C Liquid Crystals* B. I. Ostrovskii, 1989 Reviews recent studies of X ray scattering phenomena in liquid crystals in particular their relationship to phase transition physics Also explored are the main approximations which are used to obtain structural information from the scattering spectre of liquid crystals and to determine the short range order in the molecule arrangement Spin Supercurrent and Magnetic Relaxation in Helium-3 A. Ioffe, 1990 Three scientists from the L D Landau Institute of Theoretical Physics Moscow review recent developments in the theory of spin glasses and related strongly disordered systems They discuss in particular the problems of irreversibility and nonergodicity in the framework of the mean field theory a phase transition in three dimensional spin glasses and glass like systems with hidden correlations Addressed to researchers in theoretical physics Book club price 59 Annotation copyrighted by Book News Inc Portland OR

Electron Liquid in Disordered Conductors A. M. Finkel'stein, Finkel'stein, 1991 This volume proceeds from a description of a disordered electron liquid via effective functional or diffusion modes to a theory of interacting electrons in disordered conductors that is of the Fermi liquid type but with renormalizable parameters The influence of disorder on the temperature of the superconducting transition in homogeneous amorphous films is analyzed theoretically Critical properties in the vicinity of metal insulator transitions are discussed and spin instability is considered the latter shows the great importance of spin fluctuation in the region of the transition *Energy and water development appropriations for 2005* United States.
