

Chapter 10: Practical Geometry

Exercise 10.4 (Page 202)

Q1. Construct $\triangle ABC$, given $m\angle A = 60^\circ$, $m\angle B = 30^\circ$ and $AB = 5.8$ cm.

Difficulty Level: Medium

What is given / known:

Length of side of a triangle ABC, $AB = 5.8$ cm and $\angle A = 60^\circ$, $\angle B = 30^\circ$.

To construct:

A triangle $\triangle ABC$, given $\angle A = 60^\circ$, $\angle B = 30^\circ$ and $AB = 5.8$ cm.

Reasoning:

To Construct a $\triangle ABC$ such that $\angle A = 60^\circ$, $\angle B = 30^\circ$ and $AB = 5.8$ cm., follow the steps given below.

Solution:

Steps of construction –

- 1) Draw a line segment AB of length 5.8 cm.
- 2) At A, draw ray AY making 60° with AB.
- 3) At B, draw ray BX making 30° with AB.
- 4) Rays BX and AY will intersect at point C.

Triangle ABC is now completed.

Q2. Construct $\triangle PQR$ if $PQ = 5$ cm, $m\angle PQR = 105^\circ$ and $m\angle QRP = 40^\circ$.
 (Hint: Recall angle-sum property of a triangle).

Difficulty Level: Medium

Ko, Kwang-Seuk Ko, 2015-12-01 Each chapter contains a study guide that goes in depth into each subject before the practice problems For each concept there are step by step explanations on how to approach the solving problems There are a variety of practice problems on which covers everything that had been gone over in the study guide Afterwards there is a self test that assesses that knowledge of the student And in the middle of the book there is another review test that grasps the reader s knowledge all the previous chapters The table of contents Chapter 1 Basic Geometry The basic elements of geometry are introduced where the student analyzes different kinds of angles and learn many fundamental terms about geometry Chapter 2 Inductive and Deductive Reasoning This chapter introduces the conditional statement and their various forms and shows various properties of equality to solve algebraic equation Chapter 3 Perpendicular and Parallel Lines The properties of perpendicular and parallel lines are given with distinctive pairs of angle relationships Chapter 4 Congruent Triangles Triangles are classified by their sides and angles congruent figures and their corresponding parts are identified and triangles are proven to be congruent through different postulates and theorems Chapter 5 Triangles This chapter discusses the properties of perpendicular and angle bisectors the properties of medians and altitudes of triangles and the properties of midsegments of triangles Chapter 6 Quadrilaterals This chapter describes polygons based on limited information classifies the different kinds of quadrilaterals and shows the different properties of quadrilaterals which includes but are not limited to parallelograms squares and trapezoids Review Test Additionally the appendix contains useful formulas as well as relevant vocabulary Practical Geometry for Builders and Architects J. E. Paynter, 1921 Practical geometry for art students John Carroll (art master.), 1881 **The Structures of Practical Knowledge** Matteo Valleriani, 2017-02-20 The Structures of Practical Knowledge investigates the nature of practical knowledge why how when and by whom it is codified and once codified how this knowledge is structured The inquiry unfolds in a series of fifteen case studies which range in focus from early modern Italy to eighteenth century China At the heart of each study is a shared definition of practical knowledge that is knowledge needed to obtain a certain outcome whether that be an artistic or mechanical artifact a healing practice or a mathematical result While the content of practical knowledge is widely variable this study shows that all practical knowledge is formally equivalent in following a defined workflow as reflected in a construction procedure a recipe or an algorithm As explored in the volume s fifteen contributions

there are three levels at which structures of practical knowledge may be understood and examined At the most immediate level there are the individual workflows that encompasses practical knowledge itself Probing further it is possible to examine the structure of practical knowledge as it is externalized and codified in texts drawings and artifacts such as models Finally practical knowledge is also related to social structures which fundamentally determine its dissemination and evolution into new knowledge structures The social structures of professionals and institutions represent the critical means by which practical knowledge takes form These actors are the agents of codification and by means of selection appropriation investment and knowledge development they determine the formation of new structures of practical knowledge On a more abstract level the creation of new knowledge structures is understood as constituting the basis for the further development of scientific knowledge Rich in subject matter and incisive in the theory it lays out this volume represents an important contribution to the history of science and epistemology Individually the fifteen case studies encompassing the history of architecture mining brewing glass production printing ballistics mechanics cartography cosmology and astronomy are replete with original research and offer new insights into the history of science Taken together the contributions remodel historical epistemology as a whole elucidating the underlining knowledge structures that transcend disciplinary boundaries and that unite practitioners across time and space
