Practical Problems In Research Methods A Casebook:

Practical Problems in Research Methods Estabrook Verdugo, 2016-09-13 Each of the 53 cases presents a practical problem faced by a researcher and the solution he or she selected. The questions encourage students to evaluate the researcher's solution and consider alternatives. All cases are drawn from the published literature. Your students will evaluate real problems faced by practicing researchers. All major topics in research methods are covered. Here are samples from the seven major sections of the book: Sampling, Sampling Hispanic Adults by Telephone, Measurement, Social Desirability, Operational Definitions, Defining Physical Abuse of Children, Procedures, Controlling the Distribution of a Questionnaire, Experimental and Causal Comparative Design, Forming Comparison Groups in Classroom Research, Research on Reading, Ethical Considerations, Prescreening Adolescents for Stress, Interpretation of Results, Health Risk Behaviors of Adolescents. The extensive instructor's guide provides discussion points as well as samples of students' answers obtained in the field tests. This supplementary book makes dry textbook principles come alive. Students learn that research is a dynamic process that for many problems there are competing solutions, each with its own advantages and drawbacks. The 35 short cases are ideal for classroom discussions. The 18 longer ones make great homework assignments.

The Elements of Inquiry Peter J. Burke, Sara Jimenez Soffa, 2018-03-23

The *Elements of Inquiry* covers the basic guidelines for graduate students doing an investigation or inquiry project. It distills the rubrics necessary for teaching research methods and completing research projects and gives the student researcher a list of steps to follow to complete any type of inquiry project, including formal research projects such as doctoral dissertations. It was written to support the work of students in an educational leadership doctoral program, but it will also assist the research efforts of college students at any level in any discipline. The book begins by establishing the underlying philosophical concepts upon which all good research is based, preparing students to get down to the nuts and bolts of conducting their own research and evaluating the research of others. Fundamental concepts and rules of research are explained both for producers and consumers of social science and educational research. Numerous practical examples illustrate the steps in the research process presented in the text. There are end-of-chapter exercises for students to apply the concepts discussed in the chapter. Templates for organizing and presenting research provide students with a game plan for success with their research. The book ends with an up-to-date annotated bibliography of beginning and advanced research texts, allowing students easy access to books that detail the more specialized research topics. While most research books detail one or more method in depth, this text provides a broad introduction to many techniques and models used in doctoral dissertations and will be of particular value to those who are consumers of inquiry studies and research reports. Key to the overview provided is the annotated bibliography that leads the reader to the next stage of understanding or doing research.

Research Methods in Education Louis Cohen, Lawrence Manion, Keith Morrison, 2013-03-07 This rewritten expanded and updated 7th edition of the long running bestseller *Research Methods in Education* encompasses the whole range of methods currently employed by educational research at all stages. It offers plentiful and rich practical advice underpinned by clear theoretical foundations, research evidence and up to date references. Chapters new to this edition cover Causation, critical educational research, evaluation and the politics of research including material on cross cultural research, mixed methods and participatory research. Choosing and planning a research project including material on sampling, research questions, literature reviews and ethical issues. Meta analysis, research syntheses and systematic reviews. Virtual worlds and internet research. Using and analysing visual media and data in educational research. Organizing and presenting qualitative data, content analysis, coding and computer analysis, themes, narratives, conversations and discourses, grounded theory. Understanding and choosing statistical tests, descriptive and inferential statistics, multi dimensional measurement and factor analysis. *Research Methods in Education* is essential reading for both the professional researcher and students of education at undergraduate and postgraduate level who need to understand how to plan, conduct, analyse and use research. The textbook is accompanied by a website www.routledge.com/textbooks/cohen7e. PowerPoint slides for every chapter contain an outline of the chapter structure followed by a thorough summary of the key points, ideal for both lecturers and students. Within the book a variety of internet resources are referred to and these references have been included here with links to the websites. A wide range of supplementary documents are available for many chapters providing additional guidance and examples. They range from guidelines for the contents of a research proposal with a worked example to screen print manuals for using SPSS and QSR N6, NUD IST, exportable to NVivo plus data files.

Social Research Methods Clive Seale, 2004 Bringing together many of the core classic and contemporary works in social and cultural research methods, this book gives students direct access to methodological debates and examples of practical research across the qualitative/quantitative divide. The book is designed to be used both as a collection of readings and as an introductory research methods book in its own right. Topics covered include research methodology, research design, data collection and preparation, analyzing data, mixing qualitative and quantitative methods, validity and reliability, methodological critique, postmodernism, post structuralism and critical ethnography, political and ethical aspects of research, philosophy of social science, reporting research. Each section is preceded by a short introduction placing the readings in context. This reader text also includes features such as discussion questions and practical exercises.
