Cheng, 2010-01-18 In many parts of the world groundwater resources are under increasing threat from growing demands, wasteful use and contamination To face the challenge good planning and management practices are needed A key to the management of groundwater is the ability to model the movement of fluids and contaminants in the subsurface The purpose of this book is to construct conceptual and mathematical models that can provide the information required for making decisions associated with the management of groundwater resources and the remediation of contaminated aquifers The basic approach of this book is to accurately describe the underlying physics of groundwater flow and solute transport in heterogeneous porous media starting at the microscopic level and to rigorously derive their mathematical representation at the macroscopic levels The well posed macroscopic mathematical models are formulated for saturated single phase flow as well as for unsaturated and multiphase flow and for the transport of single and multiple chemical species Numerical models are presented and computer codes are reviewed as tools for solving the models The problem of seawater intrusion into coastal aquifers is examined and modeled The issues of uncertainty in model input data and output are addressed The book concludes with a chapter on the management of groundwater resources Although one of the main objectives of this book is to construct mathematical models the amount of mathematics required is kept minimal      *Biotechnology, Bioremediation* Kim Guenther, 1994      **In Situ Soil Remediation** A.M. Otten, 1997-09-30 In situ remediation techniques have experienced a boom over the last few years thereby producing a wide range of valuable experiences Their results have demonstrated that in situ techniques are a mature alternative to conventional remediation techniques Irrespective of future policy developments it is impossible to imagine future remediation practice without the use of in situ techniques The book presents an overview of recent developments in the field of in situ soil remediation The book is unique in that it is not a compilation of unrelated case studies A conceptual approach has been chosen remediation models described in this book are illustrated from a practical point of view The authors present the Dutch way of treating contaminated land The Netherlands is renowned for being at the forefront of remediation techniques as a result of the country's progressiveness and experience in this area      *Advances in Agronomy*, 1996-05-09 Volume 56 contains six reviews covering key contemporary topics on crop and soil sciences Three chapters focus on soils, health and sustainability phytoremediation of contaminated soils and sorption by soils The other three chapters focus upon the control of weeds, the improvement of drought tolerance in plants and corn and aflatoxins With this latest volume *Advances in Agronomy* continues to be recognized as a prolific and first rate reference by the scientific community In 1993 *Advances in Agronomy* increased its publication frequency to three volumes per year and will continue this trend as the breadth of agronomic inquiry and

knowledge continues to grow Soil health and sustainability Phytoremediation Biological control of weeds Organic chemistry of soils Drought tolerance in plants Aflatoxins and corn Journal of AOAC International ,1993 **Management of Contaminated Site Problems** Kofi Asante-Duah,1995-12-05 For all aspects of managing contaminated sites from diagnosis and site characterization to the development and implementation of site restoration programs Management of Contaminated Site Problems provides you with all the tools and techniques you need This excellent new resource on understanding and managing environmental contamination problems in general and contaminated sites in particular represents a collection and synthesis of modern issues It defines common procedures used in the planning development and evaluation of corrective measures for potentially contaminated sites and facilities It also includes example analyses and workplans for evaluating and implementing corrective measures
