Biomechanics: Current Interdisciplinary Research S.M. Perren, E. Schneider, 2012-12-06 The papers presented at the Fourth Meeting of the European Society of Biomechanics held in collaboration with the European Society for Biomaterials in late September 1984 in Davos Switzerland are published herewith The main idea of the meeting was to gather together the many disciplines of researchers and clinicians active and interested in promoting biomechanical knowledge in one interdisciplinary society the European Society of Biomechanics We feel that the dialog across the disciplines is one of the important goals of the society a goal which can be furthered by meetings like the one in Davos A surgeon whether a general trauma or orthopaedic surgeon is normally brought up without relevant exposure to specific technical problems It therefore is not surprising that he speaks a different language with respect to mechanical problems than an engineer Although a surgeon often has a feeling for what the solution to a particular problem might be a fruitful interdisciplinary collaboration is made difficult by this scientific language barrier On the other hand a physicist chemist engineer and metallurgist to name a few would do well with a realistic perception of the possibilities and limitations of surgery and of the relevance of a solution found to the initial question Similar problems exist in other areas e g in the field of sports biomechanics in the dialogue between coach and researcher Interdisciplinary misunderstandings have led to quite some unnecessary frustration in the past

that idea to form the Society for General Systems Research In examining the life and work of the SGSR's five founding members Ludwig von Bertalanffy, Kenneth Boulding, Ralph Gerard, James Grier Miller, and Anatol Rapoport, Hammond traces the emergence of systems ideas across a broad range of disciplines in the mid twentieth century. Both metaphor and framework, the systems concept as articulated by its earliest proponents highlights relationship and interconnectedness among the biological, ecological, social, psychological, and technological dimensions of our increasingly complex lives. Seeking to transcend the reductionism and mechanism of classical science which they saw as limited by its focus on the discrete component parts of reality, the general systems community hoped to complement this analytic approach with a more holistic orientation. As one of many systems traditions, the general systems group was specifically interested in fostering collaboration and integration among different disciplinary perspectives with an emphasis on nurturing more participatory and truly democratic forms of social organization. *The Science of Synthesis* documents a unique episode in the history of modern thought, one that remains relevant today. This book will be of interest to historians of science, system thinkers, scholars, and practitioners in the social sciences, management, organization development, and related fields, as well as the general reader interested in the history of ideas that have shaped critical developments in the second half of the twentieth century.

Shaping Our World Grete Tryggvason, Diran Apelian, 2011-10-14 A look at engineering education today with an eye to tomorrow. Engineering education is in flux. While it is increasingly important that engineers be innovative, entrepreneurial, collaborative, and able to work globally, there are virtually no programs that prepare students to meet these new challenges. *Shaping Our World: Engineering Education for the 21st Century* seeks to fill this void, exploring revolutionary approaches to the current engineering curriculum that will bring it fully up to date and prepare the next generation of would-be engineers for real and lasting professional success. Comprised of fourteen chapters written by respected experts on engineering education, the book is divided into three parts that address the need for change in the way engineering is taught, specific innovations that have been tested, why they matter, and how they can be more broadly instituted, and the implications for further changes. Designed to aid engineering departments in their transition towards new modes of learning and leadership in engineering education, the book describes how to put into practice educational programs that are aligned with upcoming changes such as those proposed in the NAE's *Engineer of 2020* reports. Addressing the need to change engineering education to meet the demands of the 21st century head-on, *Shaping Our World* condenses current discussions, research, and trials regarding new methods into specific, actionable calls for change.
