

Dwellers in the temperate zones of the northern hemisphere generally think of the seasons as the more or less constant pattern in which spring follows winter and summer follows spring. But the pattern is etched far more deeply into our lives and environments. The unceasing movement of the earth, a planet turning on its axis, orbiting around the sun and encircled by the moon sets up a climatic pattern which, in turn, evokes a corresponding rhythmic response from every living thing. Among live organisms man is unique in being able to deal with changes in his habitat by ingenuity rather than by any of the remarkable escape methods found in animal life, like migration, hibernation, colour change and complex breeding cycles. Yet even he is powerless before the explosive energy of 'seasonal' events like flood, avalanche and bush fire.

Anthony Smith treats his theme in three parts: the physical effects of the earth's position in the solar system; the variety of seasonal change in all the different regions of the earth; the adaptive rhythms of animal and plant life and the enigmatic 'biological clock'.

To complement the text an outstanding documentary of beautiful photographs has been assembled, including items like the hibernating Poorwill, the only bird observed in hibernation, migrating Monarch butterflies, the mandrill in the colours of sexual display, the Arctic spring, the life of man in regions of permanent frost, earthquake, monsoon floods and many other aspects of seasonal activity on earth, captured in black and white and full colour. Diagrams and maps in the text chart these worldwide phenomena for easy reference.

A New Psychology Based on Community, Equality, and Care of the Earth Arthur W. Blume, 2020-04-14 Explains Native American psychology and how its unique perspectives on mind and behavior can bring a focus to better heal individual social and global disorders Psychology is a relatively new discipline with foundations formed narrowly and near exclusively by white European males But in this increasingly diverse nation and world those foundations filled with implicit bias are too narrow to best help our people and society says author Arthur Blume a fellow of the American Psychological Association According to Blume a narrowly based perspective prevents out of the box thinking research and treatment that could well power greater healing and avoidance of disorders In this text Blume explains the Native American perspective on psychology detailing why that needs to be incorporated as a new model for this field A Native American psychologist he contrasts the original culture of psychology's creators as it includes individualism autonomy independence and hierarchical relationships with that of Native Americans in the context of communalism interdependence earth centeredness and egalitarianism As Blume explains psychological happiness is redefined by the reality of our interdependence rather than materialism and individualism and how we do things becomes as important as what we accomplish
