Amadi-Echendu,Kerry Brown,Roger Willett,Joseph Mathew,2012-11-05 Asset Condition Information Systems and Decision Models is the second volume of the Engineering Asset Management Review Series The manuscripts provide examples of implementations of asset information systems as well as some practical applications of condition data for diagnostics and prognostics The increasing trend is towards prognostics rather than diagnostics hence the need for assessment and decision models that promote the conversion of condition data into prognostic information to improve life cycle planning for engineered assets The research

papers included here serve to support the on going development of Condition Monitoring standards This volume comprises selected papers from the 1st 2nd and 3rd World Congresses on Engineering Asset Management which were convened under the auspices of ISEAM in collaboration with a number of organisations including CIEAM Australia Asset Management Council Australia BINDT UK and Chinese Academy of Sciences Beijing University of Chemical Technology China Asset Condition Information Systems and Decision Models will be of particular interest to finance maintenance and operations personnel whose roles directly affect the capability value of engineering asset base as well as asset managers in both industry and government

**Proceedings of the ASME Design Engineering Division ...**, 2002      **Infrasound Monitoring for Atmospheric Studies** Alexis Le Pichon, Elisabeth Blanc, Alain Hauchecorne, 2010-01-19 The use of infrasound to monitor the atmosphere has like infrasound itself gone largely unheard of through the years But it has many applications and it is about time that a book is being devoted to this fascinating subject Our own involvement with infrasound occurred as graduate students of Prof William Donn who had established an infrasound array at the Lamont Doherty Geological Observatory now the Lamont Doherty Earth Observatory of Columbia University It was a natural outgrowth of another major activity at Lamont using seismic waves to explore the Earth s interior Both the atmosphere and the solid Earth feature velocity seismic or acoustic gradients in the vertical which act to refract the respective waves The refraction in turn allows one to calculate the respective background structure in these mediums indirectly exploring locations that are hard to observe otherwise Monitoring these signals also allows one to discover various phenomena both natural and man made some of which have military applications

*Technology for a Quieter America* National Academy of Engineering, Committee on Technology for a Quieter America, 2010-10-30 Exposure to noise at home at work while traveling and during leisure activities is a fact of life for all Americans At times noise can be loud enough to damage hearing and at lower levels it can disrupt normal living affect sleep patterns affect our ability to concentrate at work interfere with outdoor recreational activities and in some cases interfere with communications and even cause accidents Clearly exposure to excessive noise can affect our quality of life As the population of the United States and indeed the world increases and developing countries become more industrialized problems of noise are likely to become more pervasive and lower the quality of life for everyone Efforts to manage noise exposures to design quieter buildings products equipment and transportation vehicles and to provide a regulatory environment that facilitates adequate cost effective sustainable noise controls require our immediate attention Technology for a Quieter America looks at the most commonly identified sources of noise how they are characterized and efforts that have been made to reduce noise emissions and experiences The book also reviews the standards and regulations that govern

noise levels and the federal state and local agencies that regulate noise for the benefit safety and wellness of society at large In addition it presents the cost benefit trade offs between efforts to mitigate noise and the improvements they achieve information sources available to the public on the dimensions of noise problems and their mitigation and the need to educate professionals who can deal with these issues Noise emissions are an issue in industry in communities in buildings and during leisure activities As such Technology for a Quieter America will appeal to a wide range of stakeholders the engineering community the public government at the federal state and local levels private industry labor unions and nonprofit organizations Implementation of the recommendations in Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products
