**Evolution, Explanation, Ethics and Aesthetics** Francisco J. Ayala, 2016-07-21 Evolution Explanation Ethics and Aesthetics Towards a Philosophy of Biology focuses on the dominant biological topic of evolution It deals with the prevailing philosophical themes of how to explain the adaptation of organisms the interplay of chance and necessity and the recurrent topics of emergence reductionism and progress In addition the extensively treated topic of how to explain human nature as a result of natural processes and the encompassed issues of the foundations of morality and the brain to mind transformation is discussed The philosophy of biology is a rapidly expanding field not more than half a century old at most and to a large extent is replacing the interest in the philosophy of physics that prevailed in the first two thirds of the twentieth century Few texts available have the benefit of being written by an eminent biologist who happens to be also a philosopher as in this work This book is a useful resource for seminar courses and college courses on the philosophy of biology Researchers academics and students in evolutionary biology behavior genetics and biodiversity will also be interested in this work as will those in human biology and issues such as ethics religion and the human mind along with professional philosophers of science and those concerned with such issues as whether evolution is compatible with religion and or where morality comes from Presents the unique perspective of a distinguished biologist with extensive experience in the field who has published much about the subject in a wide variety of journals and edited volumes Covers the philosophical issues related to evolution and biology in an approachable and readable style Includes the most up to date treatment of this burgeoning exciting field within biology Provides the ideal guide for researchers academics and students in evolutionary biology behavior genetics and biodiversity

*Evolutionary Change* Aron Katsenelinboigen, 2019-06-07 Originally published in 1997 Evolutionary Change addresses the somatic mechanism of change Although astounding advances in molecular biology have opened up new engineering possibilities to shape our future in terms of improving the human species as well as eradicating all kinds of pathological characteristics of biological development these possibilities pose potentially serious dangers They arise primarily from the local nature of changes that are introduced and the impact of the environment on the overall development of the biological system The book explores the biological mechanisms of change in their entirety as they fit into the general dynamics of biological systems and demonstrates the pitfalls of tackling change from a narrow perspective using cancer as an example of certain pathological manifestations of these mechanisms of change

Radiation Risk Estimates in Normal and Emergency Situations Arrigo A. Cigna, Marco Durante, 2007-05-22 This book follows up a 2005 International Conference in Yerevan Armenia dedicated to the 70th anniversary of the 1935 publication of the green paper by N W Timofeeff Ressovsky K Zimmer and M Delbruck entitled On the origin of gene mutations and gene structure This was the starting point of the NATO Advanced Research Workshop whose proceedings are published in this book with papers dealing directly with Timofeeff Ressovsky s life and the green pamphlet

**Physical Approaches to Biological Evolution** Mikhail V.

Volkenstein,2012-12-06 Mr Wolkenstein s Physical Approaches to Biological Evolution whether or not it proves to give the ultimate truth on the matters with which it deals certainly deserves by its breadth and scope and profundity to be considered an important event in the philosophical world This is a quotation from an introduction written by Bertrand Russell for Ludwig Wittgenstein s Tractatus Logico Philosophicus I exchanged only name and subject As for the rest I could continue quoting Russell but I would rather say something myself As Wittgenstein did with formal logic Wolkenstein rectifies our views on how to approach the logic of life from a formal theoretical basis Many biologists do not believe that their subject lends itself to the scrutiny of physical theory They certainly admit that one can simulate biological phenomena by models that can be expressed in a mathematical form However they do not believe that biology can be given a theoretical foundation that is defined within the general framework of physics Rather they insist on a holistic approach banning any reduction to fundamental principles subject to physical theory

Orthogenesis versus Darwinism Igor Popov,2018-08-22 This book reviews the convoluted history of orthogenesis with an emphasis of non English sources untangles relationships between various concepts of directed evolution and argues whether orthogenesis has something to offer modern biology Darwinism claims that evolution occurs by selection from an extensive random variability An alternative viewpoint that the material for variability is limited and organisms are predisposed to vary in certain directions is the essence of evolutionary concepts that can be grouped together under the name of orthogenesis Dating back to Lamarck orthogenesis has existed in many guises Branded as mystical and discarded as unscientific it keeps re emerging in evolutionary discussions

**UNPUBLISHED EVOLUTIONARY PAPERS of John A. Davison** John A. Davison,2010 Development and Evolution Stanley N. Salthe,1993 Development and Evolution surveys and illuminates the key themes of rapidly changing fields and areas of controversy that the redefining the theory and philosophy of biology It continues Stanley Salthe s investigation of evolutionary theory begun in his influential book Evolving Hierarchical Systems while negating the implicit philosophical mechanisms of much of that work Here Salthe attempts to reinitiate a theory of biology from the perspective of development rather than from that of evolution recognizing the applicability of general systems thinking to biological and social phenomena and pointing towards a non Darwinian and even a postmodern biology

**Selforganization by Nonlinear Irreversible Processes** Werner Ebeling,Heinz Ulbricht,2012-12-06 These Proceedings contain invited lectures presented at the third International Conference on Irreversible Processes and Dissipative Structures in Kihlungsborn German Democratic Republic in March 1985 These conferences the first of which was held in Rostock in 1977 and the second in Berlin in 1982 are devoted to the study of irreversible processes far from thermal equilibrium and to the phenomena of selforganization The meeting in Kihlungsborn brought together some 160 mathematicians physicists chemists and biologists from 10 countries who are all interested in the interdisciplinary field of synergetics The main topics of the conference were basic concepts of selforganization and evolution such as entropy instabilities nucleation dissipative structures chaos and

turbulence The contributions cover methods from their modynamics the theory of dynamic systems stochastic and statistic theory the method of Green s functions the fluctuation dissipation theorem etc Several problems are studied in more detail e g the kinetics of nucleation especially in finite systems the dynamics of interfaces reaction diffusion sys tems chemical and biochemical pattern formation and information process ing Further several contributions are devoted to the development of the concepts of chaos and turbulence The editors hope that the contributions collected in this volume will pro vide some new information about the field of selforganization which is in full development now

**The Limits of Structuralism** James McElvenny,2023 Based around seven primary texts spanning 130 years this volume explores the conceptual boundaries of structuralism The texts are made accessible to present day English speaking readers through translation and extensive critical notes each text is also accompanied by a detailed introduction that places it in its intellectual and historical context and outlines the insights it contains Jacket

**Collected Papers from the Institute for Biological Research of the Johns Hopkins University** ,1929 **Zoological Record** ,1927 **The Eclipse of Darwinism** Peter J. Bowler,1983 In this pioneering study of the first major challenges to Darwinism Peter J Bowler examines the competing theories of evolution identifies their intellectual origins and describes the process by which the modern concept of evolution emerged Describing the variety of influences that drove scientists to challenge Darwin s conclusions Bowler reevaluates the influence of social forces on the scientific community and explores the broad philosophical ideological and social implications of scientific theories

**Homology** Gregory R. Bock,Gail Cardew,2008-04-30 Homology as a concept became increasingly elusive during the course of the 20th century The central debates and controversies concern both fundamental definitions and the nature of the criteria by which homology is judged Attempts to move away from comparative morphology to ideas based on developmental pathways have tended to founder on the fact that developmental pathways evolve and that similar cells or tissues or structures in animals will often have different developmental origins The use of information about conserved molecules in seemingly conserved developmental processes has also proven controversial In molecular biology the use of the term homology has given rise to more debate although here the issue seems to involve primarily the criteria for assessing whether parts of genes are the same because of shared descent or for other reasons The contributions to the book explore these topics systematically There are chapters on the historical development of the concept of homology and its use in population studies Other chapters deal with issues of homology in morphological and developmental studies in behavioural studies and especially in studies at the level of molecular genetics

[The Anticolonial Linguistics of Nikolai Marr](#) Matthew Carson Allen,Robert Young,2024-11-08 The archaeologist philologist and Linguistics theoretician Nikolai Marr 1865 1934 has attracted increasing scholarly attention as a pivotal figure of late tsarist and early Soviet cultural politics and as an early anticolonial theorist He remains however an elusive thinker who is much written

about but seldom read This volume offers a representative selection of Marr s writing from several stages of his life translated here for the first time into English The selection of texts allows the reader to trace the key evolving and interconnected preoccupations that animate Marr s vast oeuvre his anti nationalist valorization of the cultural and linguistic hybridity of the Caucasus his denunciation of the imperialist complicity of Western European comparative linguistics his anti Darwinian emphasis on mixture and convergence in place of filial descent within the history of languages and his unorthodox theories of linguistic origins in gesture rather than speech Key Marrist terms such as Japhetidology or the rejection of the prevalent theory of an Indo European language family are clarified The volume contains original essays that contextualize Marr s work within the history of linguistics showing the indebtedness and applicability of his ideas to traditions that are frequently held to be unrelated to one another Russian proto structuralism French deconstruction and Indian subaltern thought This book was originally published as a special issue of Interventions International Journal of Postcolonial Studies

*Church Quarterly Review* ,1927      [The Church Quarterly Review](#) ,1927      [Seeing the Animal Whole](#) Craig Holdrege,2021-02-16 We conceive of the individual animal as a small world existing for its own sake by its own means Every creature is its own reason to be All its parts have a direct effect on one another a relationship to one another thereby constantly renewing the circle of life Thus we are justified in considering every animal physiologically perfect Goethe Every animal on earth has its own unique character the slow sloth the burrowing mole the towering giraffe the huge but flexible elephant In vivid portrayals of nine different animals Craig Holdrege shows how all of an animal s features are interconnected and reveal the animal as a whole Moreover every animal intersects with and influences the larger environment in dynamic ways Seeing the Animal Whole provides a nuanced sense for what it means to be a living being With the open ended question Who are you and with the will to let the animals themselves be his guide Holdrege avoids the pitfalls of mechanistic and anthropomorphic perspectives that skew our concepts of animals and even lead to their mistreatment This book presents an integrative view of animals and nature that you won t find elsewhere The author presents a different way of seeing and relating to nature leading to a groundbreaking understanding of animal development and evolution as creative processes with the animals as active participants Further evolution of life on earth depends largely on human activity and this book shows a way to learn from nature s living qualities so we can further rather than disrupt the health of the planet which belongs to all of its inhabitants And that matters      [Ecodynamics](#) C. A. Brebbia,2012 This book contains a series of outstanding contributions on ecodynamics that appeared in limited editions before the emergence of the International Journal of Design Nature and Ecodynamics which has now become the primary focus for this area of research The aim of ecodynamics is to relate ecosystems to evolutionary thermodynamics which can lead to appropriate solutions for sustainable development The contributions published in this volume relate to all aspects of ecosystems and sustainable development ranging from physical sciences to economics and epistemology The world of ecosystems has been dominated by the towering

personality of Ilya Prigogine to whom this volume is dedicated The first article is an extract from his autobiography written shortly before he died Prigogine s ideas are directly reflected in many of the contributions in this volume He helped set up numerous research groups all around the world including that at Siena University headed by the late Enzo Tiezzi He also influenced the work of Sven Jorgensen Bernard Patten Robert Ulanowicz Simone Bastianoni Nadia Marchettini Ricardo Pulselli T S Chon to name just a few amongst the many authors contributing to this volume This compilation of influential papers currently unavailable in the open literature will make an important contribution to the field of ecodynamics
