Hartwick, 2001 *Non-Renewable Resources Extraction Programs and Markets* J. Long-term Control of Exhaustible Resources Pierre Lasserre, 2001 This title is concerned with the issue of long term depletion of non renewable natural resources **Natural Resource Pricing and Rents** Andrey Vavilov, Georgy Trofimov, 2021-08-03 This book examines the economics of natural resource markets and pricing as well as the field of natural resource economics in general It presents the key contributions to this field of research including the pioneering works and contemporary studies The book highlights the basic principles and ideas underlying theoretical models of resource pricing The models considered in the book underline the fundamental determinants of resource prices and the economic nature of rents for non renewable and renewable resources Besides the classical theory of exhaustible resource economics the book includes several issues that are of high importance for global economic growth such as the transition to alternative energy and the economics of climate change The authors also consider the issues of commodity pricing and a resource cartel s activity that are relevant to the world oil market The book provides analytical solutions illustrated with numerical examples It allows an intuitive understanding of the subject and the model inferences through graphical illustrations and an informal introduction It therefore is a must read for everybody interested in a better understanding of resource prices resource markets and resource economics Analyzing Nonrenewable Resource Supply Douglas R. Bohi, Michael A. Toman, 2015-09-16 Originally published in 1984 Douglas A Bohi and Michael A Toman have produced a convenient reference source about disparate elements in the theory of nonrenewable resource supply and about general issues that arise when applying dynamic economic analysis The authors emphasise the inherently dynamic nature of resource supply decisions the effects of resource depletion on costs and behaviour and the influence of uncertainty about costs prices and reserves This title will be useful to students interested in environmental studies and economics practitioners and others who need to know

more about complex interactions of economic forces and the resource base **Non-Renewable Resources and Disequilibrium Macrodynamics** Robert Marks, 2017-10-17 This study first published in 1979 continues by examining the question of whether a competitive economy can efficiently allocate a stock of non renewable natural resources through time Long run analyses of competitive economies with such resources have concluded that without perfect foresight or a complete set of future markets extending infinitely far into the future there is no economic mechanism to guarantee that the initial price is set so that the economy converges to the socially desirable path of balanced growth This title will be of interest to students of environmental and natural resource economics Handbook of Natural Resource and Energy , 1993-04-08 The Handbook of Natural Resource and Energy Economics examines the current theory and sample current application methods for natural resource and energy economics This third volume deals primarily with non renewable resources It analyzes the economics of energy and minerals and includes chapters on the economics of environmental policy The Handbook provides a source reference and teaching supplement for use by professional researchers and advanced graduate students The surveys summarize not only received results but also newer developments from recent journal articles and discussion papers
