**Efficient Non-viral Vector for Gene Therapy** Bansari Shah,2013 Gene therapy is a method with great potential for the treatment of heritable disorders One difficulty with this approach is that the vectors used in early trials were derived from viruses Viral genomes have several disadvantages as vectors for gene therapy including the interruption of cancer causing genes by random insertion into the genome and activation of the immune system The purpose of this project was to compare vectors that could serve as a foundation for gene therapy that avoids these difficulties The author used as a model the treatment of Hunter syndrome a lysosomal storage disease to compare efficiencies of non viral vectors in delivering genes to cultured cells deficient in functional genes Mucopolysaccharidosis type II MPSII also known as Hunter syndrome is an x linked recessive disorder that occurs when the IDS gene located on the X chromosome becomes mutated The IDS gene is responsible for making the I2S enzyme The lack of I2S or reduced function of this enzyme causes a buildup of glycosaminoglycans GAGs within cells everywhere in the body Due to this accumulation many cells of the body become swollen which makes this disorder a progressive debilitating condition Currently enzyme replacement therapy ERT is the only FDA approved treatment option for affected individuals Unfortunately ERT does not treat or provide a cure for this disorder For a permanent therapy in the future gene therapy may be the solution In this study the author examines the effect of a non viral vector containing the IDS gene on MPSII fibroblasts The IDS gene was cloned into a non viral vector pIRES hrGFP 2a MPSII fibroblasts were transfected with the construct which encodes the I2S enzyme A 4 methylumbelliferyl sulfate 4 MUS assay was performed to test for secreted sulfatases in the conditioned media CM after transcription of the IDS gene was allowed to proceed Fluorescence indicated the release of a fluorophore when the sulfate group on the 4 MUS sulfate was cleaved by sulfatases The highest sulfatase activity was present in the CM post transfection indicating that the I2S enzyme was successfully produced and secreted The pIRES hrGFP IDS 2a construct yielded I2S enzyme up to 24 hours MPSII fibroblasts survived with the construct for up to 48 hours In this study the author shows how a non viral vector can be

used to restore gene function and prolong the life of mutated cells This non viral construct with modifications can be used to cross the blood brain barrier to treat this disease in the central nervous system CNS which is not currently available for treatment because of the blood brain barrier BBB

*Investigation of Barriers to Non-viral Gene Delivery and Design of Novel Polymer-based Gene Delivery Systems* Akin Akinc,2003 The safe and effective delivery of therapeutic genes is the most significant challenge facing gene therapy today Viral vectors remain the dominant approach for addressing the delivery problem however concerns regarding the safety of viral vectors have resulted in an increasing interest in non viral vectors Non viral vectors offer the promise of improved safety but because they have yet to match the functional sophistication of viral vectors their transfection efficiencies have lagged those of viral vectors The rational design of functional non viral vectors requires a thorough understanding of both the cell s sophisticated machinery and the vector material s functional properties We have developed a novel flow cytometry based tool for investigating both the cellular uptake and lysosomal trafficking of non viral vectors two important barriers to efficient gene transfer Using this and other tools we investigated the gene transfer properties of polyethylenimine PEI a highly effective non viral vector material We demonstrated that the transfection efficiency of this polymer is due to its ability to avoid lysosomal degradation as a result of its buffering capacity providing quantitative validation of the proton sponge hypothesis By studying the gene transfer properties of a library of polymeric vectors we were able to elucidate new vector structure function relationships We also investigated the combined impact of non structural factors such as polymer molecular weight polymer chain end group and polymer DNA ratio on gene transfer The findings of these studies have lead to the development of non viral vectors with transfection efficiencies surpassing those of PEI and Lipofectamine 2000 two of the best commercially available non viral vectors

Non-Viral Gene Therapy Xubo Yuan,2011-11-07 This book focuses on recent advancement of gene delivery systems research With the multidisciplinary contribution in gene delivery the book covers several aspects in the gene therapy development various gene delivery systems methods to enhance delivery materials with modification and multifunction for the tumor or tissue targeting

This book will help molecular biologists gain a basic knowledge of gene delivery vehicles while drug delivery scientist will better understand DNA molecular biology and DNA manipulation

**Nonviral Vectors for Gene Therapy** Mark A. Findeis,2010-11-09

The purpose of this volume of Methods in Molecular Medicine is to set forth examples of the great variety of techniques and applications that are now emerging in the field of nonviral gene therapy The book emphasizes not only specific approaches to gene delivery but in particular the best current methods to prepare handle and characterize gene delivery agents These topics are of very broad importance since gene therapy evolves from its mostly academic based experimental and clinical research to the ever increasing number of industry driven programs directed toward commercial development Successful introduction of nonviral gene therapy agents into the clinic should be expected to require rigorous manufacturing and analytical methods that readily meet the regulatory guidelines under which new drug candidates are reviewed for marketing approval Exactly what those guidelines will prove to be certainly depends on the established guidelines for review of both biological and chemical therapeutics Additionally many new techniques are being devised and applied to gene therapy research these techniques will be instrumental in developing and characterizing successful gene delivery agents

**Nonviral Vectors for Gene Therapy Methods and Protocols** has two main sections To start with there is a series of chapters on specific protocols for the synthesis characterization and application of gene delivery agents Several chapters address the topic of materials to bind with DNA to form the compact condensed phases that facilitate cellular delivery
